Build qualified US pipeline before buying lead volume.

A founder-level operating plan for Quick's first meaningful US customer base.

THE BET

Win 3–10-store operator groups with a measurable operations audit.

Diagnose cross-branch visibility, plant handoffs and migration risk; sell proof of improvement—not an "AI-first" label.

Define success at parent-account level: sales-accepted opportunities → paying logos → live stores.

3–30 stores / source ICP

₹2,700 raw Meta cost per lead

₹10L total budget / 12 months

Key correction: ₹10,00,000 ÷ ₹2,700 = ~370 raw leads only if every rupee bought leads at the same CPL; NOT 370 customers.

Start with interconnected 3–10-store dry-cleaner groups.

Keep 11–30-store chains in view; avoid an enterprise migration before proving repeatability.

PRIMARY

3–10 sites · shared plant or central reporting

Secondary: 11–30 sites

Potentially larger ACV; slower stakeholders, migration and procurement.

Account score / initial weights, to calibrate

Store count	20 pts	Economic buyer	10 pts
Operational complexity	20 pts	US deployment readiness	10 pts
Observable workflow pain	20 pts	Territory + technical fit	5 pts
Switch urgency	15 pts		

≥75 pursue · 50–74 nurture · <50 exclude

Pilot metros: DFW + Atlanta are hypotheses only. Verify 100 parent accounts/metro; rank by reachable ICP buyers per research hour.

Sell one reliable operating picture across every location.

Proof first; AI/voice, payments, migrations and integrations remain gated by product verification.

> **“Run every store, order and pickup as one operation—without losing control as you expand.”**

5 demand assets → their buyer action → signal

01 5-Store Profit Leakage Calculator	Custom ops assessment	Verified ICP SQLs
02 A Multi-Store Manager’s Morning Dashboard	Branch scorecard demo	Held-demo→SQL rate
03 Switching POS: Data, Tags, Payments, People	Migration feasibility review	Objections resolved
04 One Customer / Five Stores: Where Orders Break	Map your order flow	Qualified pain conversations
05 At-Risk Repeat Customers Without Spam	Retention workflow review	Opportunities influenced

ILLUSTRATIVE CAPACITY 5 stores × 0.5 hr/day × 26 days × $18 loaded wage = $1,170/month, not proven cash savings.

Choose channels by ICP-qualified opportunity cost—not CPL.

Search captures intent; named accounts control fit; partners transfer trust; Meta supports proof.

CHANNEL / PRIORITY	WHY IT MIGHT WIN	FAILURE MODE	DECISION SIGNAL
01 Search (phrase/exact)	Already shopping POS / software	Low keyword volume; consumers	Cost per accepted SQL
02 200-account outbound	Verified 3–10-site buyer list	High research/sales time	ICP meetings + SQLs
03 Niche partners	High-context referrals	No real partner access	Introductions → SQLs
04 Meta retargeting	Support evaluation; proof	Tiny audiences / poor fit	Incremental ICP holds
05 Decision assets	De-risk demos & switching	Traffic without intent	Asset-assisted SQLs

Reallocate only after checking stage-mature cohorts; pause irrelevant queries immediately; count seller time in full CAC.

Run one ₹30k multi-store operations audit search pilot.

Objective: reveal which high-intent pains create sales-accepted US conversations, not forecast wins.

SEARCH AD / PROPOSED

Dry Cleaner POS for Multi-Store Teams

See Every Store in One View

Managing 3+ dry-cleaning stores? Explore unified orders, reporting and pickups in a workflow-specific walkthrough.

BOOK A 20-MINUTE OPERATIONS AUDIT

Illustrative expected-value funnel

₹30,000 / ₹200	150 paid clicks
150 × 6%	9 raw leads
9 × 40%	3.6 fit leads
3.6 × 60% × 75%	1.62 held calls
1.62 × 50%	**0.81 expected SQLs**

KEYWORDS [multi location dry cleaning software] · “dry cleaning pos software” · “dry cleaning franchise software”

NEGATIVES jobs · near me · machines · laundromat · coin operated · salary · consumer pickup

Instrument truth → earn qualified meetings → scale only the winner.

A weekly joint commercial review is the operating system—not a once-a-quarter slide deck.

DAYS 01–30

PROVE THE BASELINE

- Review 90d Meta cohorts + lead definitions
- Confirm US price, demos, integrations + migration
- 10–12 operator discovery calls
- 200 verified parent accounts
- QA source tracking + ₹30k Search pilot

Deliver: CRM stage glossary, 1 LP, 2 assets, live objections

Gate: wrong product fit → stop public claims

DAYS 31–60

COMPARE REAL DEMAND

- Hand-score and contact accounts
- A/B pain-first vs ROI-first outreach
- Trial one confirmed partner session
- Coach handoff: speed, show, SQL
- Reallocate obvious query waste

Deliver: qualified-call evidence + first source ranking

Gate: meetings with no pain → revise ICP

DAYS 61–90

REPEAT OR REPAIR

- Diagnose SQL→pilot conversion
- Build objection + migration playbook
- Check locations actually activated
- Model fully loaded CAC by cohort
- Submit spend + US-support decision

Deliver: scale/pause memo and founder-owned next gates

Gate: onboarding blocker → fix readiness first

OWNERS Marketing: demand + source truth / Sales: held demos + SQL + stage updates / Product: US capability + onboarding / Growth: investment gates

Ring-fence learning; spend the next tranche only after proof.

₹10,00,000 / 12 months versus separate, NON-ADDITIVE ₹1,00,000 / 60-day cap.

12-MONTH ALLOCATION

	INR	SHARE
Intent Search	₹350k	35%
Named-account outreach	₹180k	18%
Partners + referrals	₹120k	12%
Landing / sales proof	₹120k	12%
Meta fit / retargeting	₹90k	9%
CRM / attribution	₹60k	6%
Withheld experiment reserve	₹80k	8%

TOTAL ₹10,00,000 · 100%

IF ONLY ₹1L / 60 DAYS

Search pilot	₹30k
Verified outbound	₹30k
Proof assets + landing	₹15k
CRM + follow-up	₹10k
Partner activation	₹5k
Withheld reserve	₹10k

TOTAL ₹1,00,000 · 100%

A ₹2,700 lead can imply ₹54k—or ₹270k—media CAC.

Qualification and lead-to-customer conversion, not an appealing CPL, determine viable scale.

Observed CPL × hypothetical win probability

1%	₹2,70,000	Media alone fails cap
3%	₹90,000	Consumes full cap
5%	₹54,000	₹36k before other CAC

Hypothetical payback guardrail

₹20,000 chain MRR

× 75% contribution × 6 months

= ₹90,000 total CAC cap

ACCOUNT-LEVEL FUNNEL & STAGE OWNERS

Source → verified ICP account → booked → held → sales-accepted SQL → pilot → paying logo → live locations → retention

Daily: source + sales SLA · Weekly: fit, holds, SQL, objections · Monthly: mature wins, full CAC, cohort payback

Three facts would let me start building pipeline next Monday.

Thank you. The operating plan is designed to earn investment through evidence, not optimism.

01	**A 90-day, source-level CRM export**	True ICP fit, holds, accepted opportunities, paying groups, stage lag and owner.
02	**A US readiness + pricing walkthrough**	Live feature demo, hardware/payments, data import, support, contractual plans.
03	**One sales owner + a weekly review**	US-time overlap, agreed reply SLA, mutual qualification criteria and budget gates.

Remote-ready execution = US-overlap availability + shared CRM truth + documented decisions + co-owned operator demos.
