

Calculation appendix and exact reproduction paths

Version 1.1.0 | Audited 8 October 2026 | Independent public-data research

C-E01 / Reported margin

Formula: $\text{EBIT} / \text{revenue} \times 100$.

Substitution: $703.7 / 28,666 \times 100 = 2.4548\%$.

Result: 2.45% derived EBIT margin. Units: percent EBIT/revenue. Input IDs: I-E01. Sources: CO_AR. Assumptions: .

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 4;39. Limit: Using rounded revenue of USD28.7bn gives 2.4519%; keep the same entity, period and currency.. Sensitivity: Revenue can grow while margin falls..

C-E02 / Demand to delivered sales

Formula: $\text{Population} \times \text{demand per person} \times \text{access} \times \text{capture}$, capped by delivery.

Substitution: $1\text{m people} \times 0.1\text{t} \times 50\% \text{ access} \times 20\% \text{ capture} = 10,000\text{t orders}$; $\min(10,000, 8,000, 7,000) = 7,000\text{t}$..

Result: 7,000 delivered tonnes. Units: persons, tonnes/person, fractions, tonnes. Input IDs: I-E02. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 23;40. Limit: Demand, access and capture are chosen inputs. Unmet orders cannot count as revenue.. Sensitivity: If route capacity reaches 9,000t, plant capacity still caps delivery at 8,000t..

C-E03 / Volume, revenue and EBITDA

Formula: $\text{Volume} \times \text{net price}$; $\text{volume} \times \text{unit cost}$; contribution less fixed cash cost.

Substitution: $100,000\text{t} \times \text{USD}400/\text{t} = \text{USD}40\text{m revenue}$; costs = USD34m; contribution = USD6m; less USD2m fixed cost = USD4m EBITDA..

Result: USD4m EBITDA. Units: tonnes, USD/tonne, USD. Input IDs: I-E03. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 41. Limit: EBITDA omits cash tax, capital spending and working cash. These are chosen saleable-volume and net-price inputs.. Sensitivity: A USD10/t price change at unchanged volume changes EBITDA by USD1m..

C-E04 / Yield and by-products

Formula: $\text{Input} = \text{main output} / \text{yield}$; output, by-product and loss sum to input.

Substitution: 100,000t output / 90% yield = 111,111t input; 6% by-product = 6,667t; 4% loss = 4,444t..

Result: 111,111 tonnes of input. Units: tonnes, yield fractions, USD/tonne. Input IDs: I-E04.

Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 42. Limit: By-products may earn revenue. Their quality, price and conversion cost need evidence.. Sensitivity: At 95% main yield, input is 105,263t. Reconcile the remaining mass separately..

C-E05 / Customer cost per usable output

Formula: $\text{Purchase and preparation cost} / \text{usable output}$.

Substitution: Offer A: $(\text{USD}30 + \text{USD}5) / 45\text{kg} = \text{USD}0.7778/\text{kg}$. Offer B: $(\text{USD}32 + \text{USD}4) / 48\text{kg} = \text{USD}0.7500/\text{kg}$..

Result: B costs 3.57% less per usable kg. Units: loaves/bag, money/loaf, money/bag. Input IDs: I-E05. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 8;21;43. Limit: Chosen flour-like inputs. Paid adoption also depends on cash, trust and availability.. Sensitivity: If B produces only 45kg, cost rises to USD0.80/kg and reverses the advantage..

C-E06 / Pack cash and cost per meal

Formula: Cash ticket differs from cost per use; assume 100g dry input per meal.

Substitution: Small: $(\text{₦}600 + \text{₦}100 \text{ prep}) / 5 \text{ meals} = \text{₦}140/\text{meal}$. Large: $(\text{₦}2,000 + \text{₦}400 \text{ prep}) / 20 \text{ meals} = \text{₦}120/\text{meal}$..

Result: Small cash ticket ₦600; large pack 14.29% cheaper per meal. Units: kg/pack, money/pack, money/kg. Input IDs: I-E06. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 8;22;44. Limit: Chosen Nigerian cash units and serving size. The large pack needs more upfront cash.. Sensitivity: Large purchase cash is 3.33 times the small pack, despite lower cost per meal..

C-E07 / Percent versus percentage points

Formula: Distinguish absolute percentage-point change from relative percentage change.

Substitution: $10\% - 8\% = 2 \text{ percentage points}$. Relative increase = $(10 - 8) / 8 = 25\%$..

Result: 2 percentage points; 25% relative increase. Units: percent and percentage points. Input IDs: I-E07. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 45. Limit: A margin change is not the same measure as revenue growth.. Sensitivity: On USD100 revenue, profit rises from USD8 to USD10..

C-E08 / Profit to free cash

Formula: EBIT less tax, plus D&A, less maintenance/growth capex and change in NWC.

Substitution: EBITDA 4 – D&A 1 = EBIT 3; tax = 0.75. FCFF = 3 – 0.75 + 1 – 0.6 – 0.4 – 1 = 1.25 (USDm)..

Result: USD1.25m free cash flow. Units: USDm, years, tax fraction. Input IDs: I-E08. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 46. Limit: Assume no prior tax losses, 25% tax, USD0.6m maintenance and USD0.4m growth capex.. Sensitivity: If NWC does not increase, this period's cash rises by USD1m..

C-E09 / Working-capital release

Formula: Revenue basis for receivables; cost basis for inventory; DPO unchanged.

Substitution: AR: $\text{USD}40\text{m} \times 5 / 365 = \text{USD}0.547945\text{m}$. Inventory: $\text{USD}34\text{m} \times 7 / 365 = \text{USD}0.652055\text{m}$. Total = USD1.20m..

Result: USD1.20m once-only cash release. Units: USDm, annual days. Input IDs: I-E09. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 24;47. Limit: All sales are credit in this example. The transition release is not recurring annual profit.. Sensitivity: One further DSO day releases USD0.109589m at this sales base..

C-E10 / Inherited Nigeria screen

Formula: Inherited additive uplift and sales-day proxy; ramped three-year DCF.

Substitution: $100 \times (2\% + 2\%) \times 8\% + 0.7 + 0.6 - 0.4 - 0.45 - 0.30 = 0.47$; $100 \times 7 / 365 = 1.9178$ (NGNbn)..

Result: NPV –NGN2.0645bn; zero-NPV uplift NGN1.9928bn/year. Units: NGN billion; percent; years. Input IDs: I-E10. Sources: BASELINE. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 20;48. Limit: NGN4.2bn initial capital; 28% hurdle; 50/80/100% benefit ramp. Tax, replacement and actual cash bases are absent.. Sensitivity: Repair procurement FX overlap, AR/inventory/AP, capex, tax and currency before a production decision..

C-E11 / FX and commodity interaction

Formula: Local imported cost = USD commodity price × local currency per USD.

Substitution: $\text{USD}100 \times \text{₹}1,000/\text{USD} = \text{₹}100,000$. With both factors +10%: $\text{USD}110 \times \text{₹}1,100 = \text{₹}121,000$, or +21%..

Result: 21% combined input-cost increase. Units: money units; FX/input-cost fractions. Input IDs: I-E11. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 22;49. Limit: Both shocks hit the same procurement base. Hedge effects need documented contracts.. Sensitivity: Chosen 70% cost pass-through recovers 14.7% initially; weaker customer volume may reduce retained margin..

C-E12 / Finite NPV and commissioning

Formula: Discount each dated free cash flow; do not compare only undiscounted totals.

Substitution: $\text{NPV} = -5 + 2/1.10 + 2/1.10^2 + 2/1.10^3 = -0.0263$ (USDm)..

Result: NPV –USD0.0263m. Units: USDm, years, annual real rate. Input IDs: I-E12. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 50. Limit: No terminal value. Staging USD3m now and USD2m in year 1, with cash in years 2–4, gives –USD0.2966m.. Sensitivity: Paying USD5m now with a one-year cash delay gives –USD0.4784m..

C-E13 / Real and nominal consistency

Formula: Consistent inflation of both cash and discount rate preserves NPV.

Substitution: $(1.10 \times 1.05) - 1 = 15.5\%$ nominal hurdle. Year 1: $2.10 / 1.155 = 2.00 / 1.10$..

Result: Real and nominal three-year NPVs both –USD0.0263m. Units: annual nominal/real/inflation fractions. Input IDs: I-E13. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 51. Limit: Nominal cash grows by 5% inflation and is discounted at 15.5%. Project and currency risk require separate care.. Sensitivity: Mixing nominal cash with a real hurdle overstates value..

C-E14 / Operating versus investment break-even

Formula: Operating break-even pays fixed cash cost; investment break-even also pays capital.

Substitution: $\text{USD}2\text{m} / (\text{USD}400 - \text{USD}340 \text{ per tonne}) = 33,333\text{t}$; $/ 150,000\text{t capacity} = 22.22\%$ utilization..

Result: Operating 33,333t; investment boundary 104,862 initial order tonnes. Units: tonnes/year; USD/tonne; USDm. Input IDs: I-E14. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: scripts/olam-package.py: examples. Slide: 52. Limit: Full NPV includes ramp, tax, replacement, working cash and the finite horizon.. Sensitivity: Operating above 22.22% utilization can still give negative investment NPV..

C-E15 / Scenario weights are not likelihood

Formula: Weighted average = sum of chosen weight $\times$ conditional NPV.

Substitution: Chosen NPVs [10, -8, 2] and weights [0.5, 0.3, 0.2]: $5 - 2.4 + 0.4 = \text{USD}3\text{m}..$

Result: USD3m judgement-weighted mean. Units: USDm; chosen scenario weights. Input IDs: I-E15. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: scripts/olam-package.py: examples. Slide: 53. Limit: The central USD10m case is not a calibrated most-likely future. The adverse loss can breach funding.. Sensitivity: If adverse weight is 0.5 and central weight 0.3, the mean becomes -USD0.6m..

C-E16 / Loss-tail VaR and CVaR

Formula: Loss = $\max(0, -\text{NPV})$; a quantile differs from the mean of a chosen tail.

Substitution: NPVs [-8, -4, 0, 2, 6] imply losses [0, 0, 0, 4, 8]. Nearest-rank VaR80 = 4; worst-20% CVaR80 = 8 (USDm)..

Result: Loss VaR80 USD4m; tail CVaR80 USD8m. Units: USDm loss; chosen quantile. Input IDs: I-E16. Sources: CVAR. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: scripts/olam-package.py: examples. Slide: 54. Limit: Declare discrete tie treatment: $\text{mean}(\text{loss} \geq \text{VaR})$ would be USD6m here, a different convention.. Sensitivity: Stress code uses $\text{mean}(\text{loss} \geq 95\% \text{ quantile})$. Its chosen continuous generator has negligible ties..

C-E17 / Common-exposure diversification

Formula: Equal individual average losses can conceal different joint tail exposures.

Substitution: Each source loses USD10m with chosen probability 0.2. A shared port produces joint loss USD20m with probability 0.2; independent joint probability is 0.04..

Result: Expected total loss USD4m in both; joint tail differs. Units: USDm loss; covariance. Input IDs: I-E17. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: scripts/olam-package.py: examples. Slide: 27;55. Limit: Chosen probabilities illustrate dependence. Country flags do not remove a shared crop season or port.. Sensitivity: A different basin without a different port can leave route exposure unchanged..

C-E18 / Difference in differences

Formula: Subtract the counterfactual change from the treated change.

Substitution: Treated sales: 100 → 130. Control: 100 → 110. DiD = $(130 - 100) - (110 - 100) = 20$.

Result: 20 illustrative incremental eligible sales units. Units: outcome units; customers; periods. Input IDs: I-E18. Sources: DID. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 31;56. Limit: Parallel trends and no material spillovers are required. Four chosen means cannot support an estimated interval.. Sensitivity: At USD2 contribution/unit, gross incremental contribution is USD40 before service and pilot cost..

C-E19 / Incremental ROMI

Formula: Net incremental contribution after marketing / marketing spend.

Substitution: Incremental contribution 120 – service 20 – trade 10 – cannibalisation 10 = 80. Marketing spend 40. Net ROMI = $(80 - 40)/40 = 100\%$.

Result: 100% net ROMI; contribution/spend is 2.0 times. Units: USDm contribution and marketing spend. Input IDs: I-E19. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 31;57. Limit: All inputs are chosen currency-thousands. Use a paid-sales counterfactual and full incremental costs.. Sensitivity: If contribution after other costs is only 40, net ROMI is zero. Multi-year proposals need NPV..

C-E20 / Decision value of information

Formula: Optimal decision value after information less before information, study and delay costs.

Substitution: Good state $p=0.5$: investment NPV 10; bad state $p=0.5$: –8; wait 0. Best prior EV=1; perfect-information EV=5; less study 1 and delay 0.5 gives net gain 2.5..

Result: USD2.5m net perfect-information ceiling. Units: USDm project/study/delay; chosen probability. Input IDs: I-E20. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-package.py: examples. Slide: 28;58. Limit: A perfect study is an upper bound. Do not add its benefit again to a policy that already includes learning.. Sensitivity: An imperfect pilot may be worth less than its cost; keep the wait option..

C-E21 / Reverse stress

Formula: Solve the full NPV root and monitor the mechanism that moves it.

Substitution: The managed owned template reaches zero NPV at 104,862 initial annual order tonnes. The current 100,000t base needs 4.86% more initial orders..

Result: About 4.86% more initial orders needed. Units: USDm; tonnes; annual rate. Input IDs: I-E21. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: scripts/olam-package.py: examples. Slide: 59. Limit: The threshold depends on cost, hurdle, tax and capacity; volume cannot repair a negative unit contribution.. Sensitivity: Cost, FX or commissioning shocks shift the boundary. Monitor orders together with cash..

C-E22 / Size ranking can reverse

Formula: Delivered units × unit contribution less fixed cost, then full cash-flow valuation.

Substitution: Country A: demand 200kt, capture 50kt, unit contribution USD20, fixed USD0.7m → EBITDA USD0.3m. B: demand 100kt, capture 40kt, contribution USD40 → USD0.9m..

Result: B has 3 times EBITDA despite half the category size. Units: USDm payoff; common budget. Input IDs: I-E22. Sources: Chosen inputs only. Assumptions: A_EXAMPLE.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: scripts/olam-package.py: examples. Slide: 60. Limit: A and B are fictional teaching cases. Chosen capex USD5m vs USD2m and NWC USD2m vs USD0.5m further favour testing B..
Sensitivity: Before capital differences, A overtakes B above 80kt captured at USD20/t while B stays at 40kt..

C-LEGACY / C-LEGACY

Formula: Inherited normalized Nigeria arithmetic.

Substitution: See named executable code and full output JSON.

Result: NGN−2.0645129269bn NPV;1.9927903115bn requiredannualuplift. Units: NGN billion; finite three-year screen. Input IDs: I_LEGACY. Sources: BASELINE. Assumptions: A_TEMPLATE;A_SCENARIO;A_TAX;A_RATE;A_NWC;A_OUTER;A_CAPEX;A_PILOT;A_STRESS;A_EXAMPLE;A_PRIOR;A_LEGACY.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: src/lib/olamNigeriaDecisionModel.ts. Slide: 3;20. Limit: Conditional, not company forecast. Sensitivity: See threshold/scenario outputs.

C-CPM / C-CPM

Formula: $(35.8 - 15.5) / 35.8$.

Substitution: See named executable code and full output JSON.

Result: 56.7039% lowerCPM. Units: Percentage reduction in self-reported CPM. Input IDs: I_TEMPLATE;I_SCENARIO. Sources: BASELINE. Assumptions: A_TEMPLATE;A_SCENARIO;A_TAX;A_RATE;A_NWC;A_OUTER;A_CAPEX;A_PILOT;A_STRESS;A_EXAMPLE;A_PRIOR;A_LEGACY.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: src/data/resume.ts. Slide: 34. Limit: Conditional, not company forecast. Sensitivity: See threshold/scenario outputs.

C-COVERAGE / C-COVERAGE

Formula: 203×6×7.

Substitution: {"version": "1.1.0", "cutoff": "2026-10-08T00:04:25+05:30", "data_retrieved_at": "2026-10-07T20:19:48.823839+00:00", "countries": 195, "dossiers": 195, "priority_diligence": 10, "investment_grade_candidates": 0, "threshold_only": 195, "country_scenario_rows": 8526, "countries_with_all_macro_fields": 162, "country_npv_estimates": 0, "population_projection_source": "UN WPP 2024 Medium variant, 2026-2051. These are external projections, not realized population.", "wdi_vintages": {"population": "2026-07-13", "income_ppp": "2026-07-13", "urban": "2026-07-13", "inflation": "2026-07-13", "food_index": "2026-07-13", "food_import_share": "2026-07-13", "food_export_share": "2026-07-13", "imports_usd": "2026-07-13", "exports_usd": "2026-07-13", "cereal_yield": "2026-07-13", "water_stress": "2026-07-13"}, "no_terminal_franchise": true, "country_driver_count": 34, "country_driver_observation_coverage": 6061, "product_decision_units": 203, "priority_product_cases": 18, "audit_date": "2026-10-08", "extended_analysis_run_at": "2026-10-08T02:47:33.622603+00:00"}.

Result: 8526 rows;195 countries;18 distinct priority product plans;34 driver series. Units: Counts. Input IDs: I_COVERAGE. Sources: UN_M49;UN_MEMBERS;UN_OBSERVERS;UN_WPP. Assumptions: A_TEMPLATE;A_SCENARIO;A_TAX;A_RATE;A_NWC;A_OUTER;A_CAPEX;A_PILOT;A_STRESS;A_EXAMPLE;A_PRIOR;A_LEGACY.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-analyse.py. Slide: 12. Limit: Conditional, not company forecast. Sensitivity: See threshold/scenario outputs.

C-TRADE-NGA / C-TRADE-NGA

Formula: Read CIFvalue only; noquantitycalculation.

Substitution: See named executable code and full output JSON.

Result: USD1,047,531,844.083CIF; netweighnull. Units: Current USD CIF; no tonnes calculation. Input IDs: I_TEMPLATE;I_SCENARIO. Sources: COMTRADE. Assumptions: A_TEMPLATE;A_SCENARIO;A_TAX;A_RATE;A_NWC;A_OUTER;A_CAPEX;A_PILOT;A_STRESS;A_EXAMPLE;A_PRIOR;A_LEGACY.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-retrieve.py. Slide: 10. Limit: Conditional, not company forecast. Sensitivity: See threshold/scenario outputs.

C-OLS / C-OLS

Formula: Laggedgrowth OLS;countryclusterCR1;holdout.

Substitution: See named executable code and full output JSON.

Result: train2856;holdout680;MAE.04829868. Units: Annual log growth; coefficient units specified by lagged predictor. Input IDs: I_OLS. Sources: WB_food_index;WB_income_ppp;WB_urban;WB_cereal_yield. Assumptions: A_TEMPLATE;A_SCENARIO;A_TAX;A_RATE;A_NWC;A_OUTER;A_CAPEX;A_PILOT;A_STRESS;A_EXAMPLE;A_PRIOR;A_LEGACY.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: scripts/olam-analyse.py. Slide: 30;66;67. Limit: Conditional, not company forecast.
Sensitivity: See threshold/scenario outputs.

C-STRESS / C-STRESS

Formula: 10,000chosenlatentfactordraws;fullcash.

Substitution: See named executable code and full output JSON.

Result: {"p10_npv": -19.270312655889544, "median_npv": -1.6547747253083456, "p90_npv": 21.484353235769948, "loss_VaR95": 24.54454163430493, "loss_CVaR95": 29.251547633706362}. Units: Real2026USD million; chosen loss quantiles. Input IDs: I_STRESS;I_TEMPLATE_plant;I_SCENARIO_managed. Sources: Chosen inputs only. Assumptions: A_TEMPLATE;A_SCENARIO;A_TAX;A_RATE;A_NWC;A_OUTER;A_CAPEX;A_PILOT;A_STRESS;A_EXAMPLE;A_PRIOR;A_LEGACY.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: scripts/olam-analyse.py. Slide: 26. Limit: Conditional, not company forecast.
Sensitivity: See threshold/scenario outputs.

C-REGRET / C-REGRET

Formula: min action max world(bestvalue–actionvalue).

Substitution: See named executable code and full output JSON.

Result: Partner chosen;worstregret4 vsowned8. Units: USD million payoff/regret. Input IDs: I_REGRET. Sources: Chosen inputs only. Assumptions: A_TEMPLATE;A_SCENARIO;A_TAX;A_RATE;A_NWC;A_OUTER;A_CAPEX;A_PILOT;A_STRESS;A_EXAMPLE;A_PRIOR;A_LEGACY.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: scripts/olam-analyse.py. Slide: 27;28;29. Limit: Conditional, not company forecast.
Sensitivity: See threshold/scenario outputs.

C-SCENARIOS / C-SCENARIOS

Formula: Chosen coherent driver vectors.

Substitution: See named executable code and full output JSON.

Result: 6worlds,unweighted. Units: Explicit in output. Input IDs: I_TEMPLATE;I_SCENARIO. Sources: Chosen inputs only. Assumptions: A_TEMPLATE;A_SCENARIO;A_TAX;A_RATE;A_NWC;A_OUTER;A_CAPEX;A_PILOT;A_STRESS;A_EXAMPLE;A_PRIOR;A_LEGACY.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A.
Code/data: scripts/olam-analyse.py. Slide: 15. Limit: Conditional, not company forecast.
Sensitivity: See threshold/scenario outputs.

C-THRESHOLD / C-THRESHOLD

Formula: $\text{Brent rootNPV}(\text{order})=0$.

Substitution: See named executable code and full output JSON.

Result: Conditional roots; null if capacity capped value < 0 . Units: Explicit in output. Input IDs: I_TEMPLATE; I_SCENARIO. Sources: Chosen inputs only. Assumptions: A_TEMPLATE; A_SCENARIO; A_TAX; A_RATE; A_NWC; A_OUTER; A_CAPEX; A_PILOT; A_STRESS; A_EXAMPLE; A_PRIOR; A_LEGACY.

Workbook: Calculation_Audit!A4:M248 (locate stable ID in column A); Sources!A:A; Inputs!A:A. Code/data: scripts/olam-analyse.py. Slide: 17; 26. Limit: Conditional, not company forecast. Sensitivity: See threshold/scenario outputs.

C-DCF / C-DCF

Formula: $25 \text{ annual FCFF at real USD hurdle}$.

Substitution: See named executable code and full output JSON.

Result: 18 mode/world cases; not country values. Units: Explicit in output. Input IDs: I_TEMPLATE; I_SCENARIO. Sources: Chosen inputs only. Assumptions: A_TEMPLATE; A_SCENARIO; A_TAX; A_RATE; A_NWC; A_OUTER; A_CAPEX; A_PILOT; A_STRESS; A_EXAMPLE; A_PRIOR; A_LEGACY.

Workbook: Country_Financials!A4:AA28; B31:B34; Assumptions!B4:B30; Unit_Economics!A4:K6; Scenario_Inputs!A4:J9. Code/data: scripts/olam-analyse.py. Slide: 16. Limit: Conditional, not company forecast. Sensitivity: See threshold/scenario outputs.

C-DCF-trade-managed / Full normalized project cash

Formula: $\text{FCFF} = \text{EBIT} - \text{tax} + \text{D\&A} - \text{capex} - \Delta \text{NWC} + \text{closeout}$; $\text{NPV} = \sum \text{discounted cash}$.

C-WBFOOD-AFG / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: AFG, 2019, exact matched observations in country-panel.csv.

Result: 1824086402.99416. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-AFG.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ALB / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ALB, 2024, exact matched observations in country-panel.csv.

Result: 1595872541.6014109. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ALB.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-DZA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: DZA, 2017, exact matched observations in country-panel.csv.

Result: 9317754794.906103. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-DZA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-AND / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: AND, 2023, exact matched observations in country-panel.csv.

Result: 426901906.45508695. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-AND.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam

revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-AGO / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: AGO, 2024, exact matched observations in country-panel.csv.

Result: 2196150985.0051885. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-AGO.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ATG / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ATG, 2024, exact matched observations in country-panel.csv.

Result: 227727305.44245392. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ATG.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ARG / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ARG, 2024, exact matched observations in country-panel.csv.

Result: 5520608117.085689. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ARG.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ARM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ARM, 2024, exact matched observations in country-panel.csv.

Result: 1427097102.4313998. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ARM.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-AUS / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: AUS, 2025, exact matched observations in country-panel.csv.

Result: 20236525638.395187. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-AUS.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-AUT / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: AUT, 2024, exact matched observations in country-panel.csv.

Result: 20189324032.95211. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-AUT.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-AZE / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: AZE, 2025, exact matched observations in country-panel.csv.

Result: 3032552512.072945. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-AZE.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BHS / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BHS, 2024, exact matched observations in country-panel.csv.

Result: 986916656.9229306. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BHS.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BHR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BHR, 2024, exact matched observations in country-panel.csv.

Result: 2343143224.4452443. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BHR.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BGD / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BGD, 2018, exact matched observations in country-panel.csv.

Result: 7865727048.813534. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BGD.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BRB / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BRB, 2024, exact matched observations in country-panel.csv.

Result: 488888234.5771056. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BRB.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BLR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BLR, 2021, exact matched observations in country-panel.csv.

Result: 4279348708.4748607. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BLR.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BEL / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BEL, 2024, exact matched observations in country-panel.csv.

Result: 62134254449.57687. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BEL.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BLZ / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BLZ, 2025, exact matched observations in country-panel.csv.

Result: 276886598.6106161. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BLZ.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BEN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BEN, 2024, exact matched observations in country-panel.csv.

Result: 1608602507.6312127. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BEN.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BTN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BTN, 2025, exact matched observations in country-panel.csv.

Result: 249712404.46984825. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BTN.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BOL / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BOL, 2024, exact matched observations in country-panel.csv.

Result: 744125651.5016854. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BOL.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BIH / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BIH, 2025, exact matched observations in country-panel.csv.

Result: 3151899554.624047. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BIH.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BWA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BWA, 2023, exact matched observations in country-panel.csv.

Result: 1054350036.7949239. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BWA.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BRA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BRA, 2025, exact matched observations in country-panel.csv.

Result: 16226920091.855171. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BRA.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BRN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BRN, 2024, exact matched observations in country-panel.csv.

Result: 595913146.2251436. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BRN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BGR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BGR, 2024, exact matched observations in country-panel.csv.

Result: 7261748940.630695. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BGR.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BFA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BFA, 2024, exact matched observations in country-panel.csv.

Result: 719463814.3152906. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BFA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-BDI / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: BDI, 2023, exact matched observations in country-panel.csv.

Result: 163585867.63748187. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-BDI.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CPV / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CPV, 2024, exact matched observations in country-panel.csv.

Result: 608562990.217463. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CPV.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-KHM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: KHM, 2024, exact matched observations in country-panel.csv.

Result: 2140805676.9942493. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-KHM.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CMR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CMR, 2023, exact matched observations in country-panel.csv.

Result: 1790205446.3931196. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CMR.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CAN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CAN, 2024, exact matched observations in country-panel.csv.

Result: 52738198428.644005. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CAN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CAF / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CAF, 2024, exact matched observations in country-panel.csv.

Result: 111490341.11110164. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CAF.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CHL / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CHL, 2025, exact matched observations in country-panel.csv.

Result: 10727237465.438208. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CHL.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CHN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CHN, 2024, exact matched observations in country-panel.csv.

Result: 209434671437.8839. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CHN.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-COL / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: COL, 2024, exact matched observations in country-panel.csv.

Result: 8812424967.658024. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-COL.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-COM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: COM, 2023, exact matched observations in country-panel.csv.

Result: 150603397.3188956. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-COM.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-COG / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: COG, 2023, exact matched observations in country-panel.csv.

Result: 997882679.388699. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-COG.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CRI / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CRI, 2024, exact matched observations in country-panel.csv.

Result: 3507461528.8276005. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CRI.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-HRV / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: HRV, 2024, exact matched observations in country-panel.csv.

Result: 6724780531.433829. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-HRV.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CUB / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CUB, 2022, exact matched observations in country-panel.csv.

Result: 2479026006.344521. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CUB.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CYP / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CYP, 2024, exact matched observations in country-panel.csv.

Result: 2064142361.8809397. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CYP.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CZE / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CZE, 2024, exact matched observations in country-panel.csv.

Result: 15731066139.102625. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CZE.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CIV / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CIV, 2024, exact matched observations in country-panel.csv.

Result: 3522187892.849888. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CIV.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-COD / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: COD, 2023, exact matched observations in country-panel.csv.

Result: 1217064532.1801777. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-COD.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-DNK / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: DNK, 2025, exact matched observations in country-panel.csv.

Result: 18474340292.202385. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-DNK.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-DJI / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: DJI, 2023, exact matched observations in country-panel.csv.

Result: 2041817341.2828631. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-DJI.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-DMA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: DMA, 2023, exact matched observations in country-panel.csv.

Result: 75983048.36405323. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-DMA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-DOM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: DOM, 2024, exact matched observations in country-panel.csv.

Result: 5140518489.511417. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-DOM.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ECU / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ECU, 2024, exact matched observations in country-panel.csv.

Result: 3605714419.8050356. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ECU.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-EGY / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: EGY, 2024, exact matched observations in country-panel.csv.

Result: 17598365051.113136. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-EGY.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SLV / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SLV, 2024, exact matched observations in country-panel.csv.

Result: 3168995940.2476444. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SLV.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ERI / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ERI, 2003, exact matched observations in country-panel.csv.

Result: 197324072.0143033. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ERI.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-EST / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: EST, 2024, exact matched observations in country-panel.csv.

Result: 3198208332.142931. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-EST.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SWZ / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SWZ, 2023, exact matched observations in country-panel.csv.

Result: 399290010.0365942. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SWZ.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ETH / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ETH, 2023, exact matched observations in country-panel.csv.

Result: 2387563737.8398194. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ETH.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-FJI / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: FJI, 2024, exact matched observations in country-panel.csv.

Result: 586991460.0482217. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-FJI.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-FIN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: FIN, 2024, exact matched observations in country-panel.csv.

Result: 7148700096.286494. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-FIN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-FRA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: FRA, 2024, exact matched observations in country-panel.csv.

Result: 79665104219.84392. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-FRA.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GAB / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GAB, 2023, exact matched observations in country-panel.csv.

Result: 662734341.1497755. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GAB.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GMB / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GMB, 2024, exact matched observations in country-panel.csv.

Result: 217433923.13417095. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GMB.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GEO / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GEO, 2024, exact matched observations in country-panel.csv.

Result: 2104083250.179856. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GEO.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-DEU / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: DEU, 2024, exact matched observations in country-panel.csv.

Result: 129540345133.0316. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-DEU.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GHA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GHA, 2023, exact matched observations in country-panel.csv.

Result: 1918465572.7958875. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GHA.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GRC / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GRC, 2024, exact matched observations in country-panel.csv.

Result: 12094682376.261883. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GRC.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GRD / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GRD, 2024, exact matched observations in country-panel.csv.

Result: 153547490.14876923. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GRD.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GTM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GTM, 2024, exact matched observations in country-panel.csv.

Result: 5656719292.372824. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GTM.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GIN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GIN, 2016, exact matched observations in country-panel.csv.

Result: 1177024563.9214342. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GIN.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GNB / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GNB, 2018, exact matched observations in country-panel.csv.

Result: 143900713.44062883. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GNB.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GUY / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GUY, 2025, exact matched observations in country-panel.csv.

Result: 661648381.9422116. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GUY.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-HTI / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: HTI, 2016, exact matched observations in country-panel.csv.

Result: 1410716550.9494019. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-HTI.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-HND / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: HND, 2024, exact matched observations in country-panel.csv.

Result: 3456003814.5955815. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-HND.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-HUN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: HUN, 2025, exact matched observations in country-panel.csv.

Result: 11223376500.537548. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-HUN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ISL / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ISL, 2025, exact matched observations in country-panel.csv.

Result: 1211318201.596844. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ISL.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-IND / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: IND, 2024, exact matched observations in country-panel.csv.

Result: 36353451674.99419. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-IND.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-IDN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: IDN, 2025, exact matched observations in country-panel.csv.

Result: 24688441582.426815. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-IDN.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-IRN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: IRN, 2022, exact matched observations in country-panel.csv.

Result: 17317866344.925434. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-IRN.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-IRQ / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: IRQ, 2014, exact matched observations in country-panel.csv.

Result: 4216939693.495306. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-IRQ.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-IRL / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: IRL, 2024, exact matched observations in country-panel.csv.

Result: 13551142022.544493. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-IRL.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ISR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ISR, 2024, exact matched observations in country-panel.csv.

Result: 9696094194.014727. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ISR.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ITA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ITA, 2024, exact matched observations in country-panel.csv.

Result: 69698335602.25407. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ITA.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-JAM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: JAM, 2023, exact matched observations in country-panel.csv.

Result: 1557473548.5443795. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-JAM.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-JPN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: JPN, 2025, exact matched observations in country-panel.csv.

Result: 73854014731.20944. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-JPN.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-JOR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: JOR, 2024, exact matched observations in country-panel.csv.

Result: 5559229378.151394. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-JOR.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-KAZ / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: KAZ, 2024, exact matched observations in country-panel.csv.

Result: 6485505633.842246. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-KAZ.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-KEN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: KEN, 2024, exact matched observations in country-panel.csv.

Result: 3265992016.644896. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-KEN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-KIR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: KIR, 2021, exact matched observations in country-panel.csv.

Result: 72942155.05429988. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-KIR.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-KWT / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: KWT, 2024, exact matched observations in country-panel.csv.

Result: 6656623700.110077. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-KWT.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-KGZ / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: KGZ, 2025, exact matched observations in country-panel.csv.

Result: 1628565076.7057798. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-KGZ.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-LAO / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: LAO, 2023, exact matched observations in country-panel.csv.

Result: 970554086.3018605. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-LAO.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-LVA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: LVA, 2025, exact matched observations in country-panel.csv.

Result: 4691964771.072992. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-LVA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-LBN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: LBN, 2024, exact matched observations in country-panel.csv.

Result: 3210566571.0703545. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-LBN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-LSO / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: LSO, 2024, exact matched observations in country-panel.csv.

Result: 425303911.4971407. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-LSO.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-LBR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: LBR, 2023, exact matched observations in country-panel.csv.

Result: 479356445.70442045. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-LBR.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-LBY / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: LBY, 2019, exact matched observations in country-panel.csv.

Result: 3262985503.1166077. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-LBY.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-LTU / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: LTU, 2025, exact matched observations in country-panel.csv.

Result: 6405877944.929144. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-LTU.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-LUX / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: LUX, 2024, exact matched observations in country-panel.csv.

Result: 3847562809.2581306. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-LUX.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MDG / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MDG, 2024, exact matched observations in country-panel.csv.

Result: 887169610.788788. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MDG.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MWI / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MWI, 2024, exact matched observations in country-panel.csv.

Result: 391020857.05394167. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MWI.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MYS / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MYS, 2025, exact matched observations in country-panel.csv.

Result: 28183520114.770557. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MYS.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MDV / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MDV, 2024, exact matched observations in country-panel.csv.

Result: 772641604.7532047. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MDV.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MLI / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MLI, 2023, exact matched observations in country-panel.csv.

Result: 943659639.2413805. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MLI.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MLT / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MLT, 2024, exact matched observations in country-panel.csv.

Result: 1129675631.2671711. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MLT.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MRT / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MRT, 2024, exact matched observations in country-panel.csv.

Result: 1149873266.7344294. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MRT.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MUS / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MUS, 2024, exact matched observations in country-panel.csv.

Result: 1451933478.9772015. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MUS.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MEX / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MEX, 2025, exact matched observations in country-panel.csv.

Result: 43194344355.36752. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MEX.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-FSM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: FSM, 2013, exact matched observations in country-panel.csv.

Result: 52196116.24639562. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-FSM.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MNG / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MNG, 2023, exact matched observations in country-panel.csv.

Result: 1018448902.5490338. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MNG.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MNE / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MNE, 2024, exact matched observations in country-panel.csv.

Result: 1038413787.3255388. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MNE.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MAR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MAR, 2024, exact matched observations in country-panel.csv.

Result: 8463887509.776004. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MAR.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MOZ / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MOZ, 2024, exact matched observations in country-panel.csv.

Result: 1804725966.4594724. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MOZ.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MMR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MMR, 2024, exact matched observations in country-panel.csv.

Result: 1212591664.825881. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MMR.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-NAM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: NAM, 2024, exact matched observations in country-panel.csv.

Result: 1173936025.4273493. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-NAM.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-NPL / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: NPL, 2022, exact matched observations in country-panel.csv.

Result: 2467074499.2321577. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-NPL.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-NLD / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: NLD, 2024, exact matched observations in country-panel.csv.

Result: 108375015749.1762. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-NLD.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-NZL / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: NZL, 2025, exact matched observations in country-panel.csv.

Result: 6091539100.05747. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-NZL.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-NIC / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: NIC, 2024, exact matched observations in country-panel.csv.

Result: 1898647237.676474. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-NIC.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-NER / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: NER, 2024, exact matched observations in country-panel.csv.

Result: 957211632.1311792. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-NER.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-NGA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: NGA, 2024, exact matched observations in country-panel.csv.

Result: 4545672778.745587. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-NGA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MKD / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MKD, 2024, exact matched observations in country-panel.csv.

Result: 1403172578.691468. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MKD.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-NOR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: NOR, 2025, exact matched observations in country-panel.csv.

Result: 11913988875.386265. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-NOR.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-OMN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: OMN, 2024, exact matched observations in country-panel.csv.

Result: 6036934615.077476. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-OMN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-PAK / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: PAK, 2024, exact matched observations in country-panel.csv.

Result: 8379735144.687548. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-PAK.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-PLW / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: PLW, 2018, exact matched observations in country-panel.csv.

Result: 40403335.559681244. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-PLW.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-PAN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: PAN, 2024, exact matched observations in country-panel.csv.

Result: 4998224452.48518. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-PAN.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-PNG / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: PNG, 2023, exact matched observations in country-panel.csv.

Result: 891879444.1693001. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-PNG.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-PRY / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: PRY, 2025, exact matched observations in country-panel.csv.

Result: 1492771074.0706718. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-PRY.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-PER / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: PER, 2024, exact matched observations in country-panel.csv.

Result: 6583080591.7393675. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-PER.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-PHL / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: PHL, 2024, exact matched observations in country-panel.csv.

Result: 20245108970.196888. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-PHL.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-POL / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: POL, 2024, exact matched observations in country-panel.csv.

Result: 37163711310.023224. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-POL.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-PRT / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: PRT, 2025, exact matched observations in country-panel.csv.

Result: 20007764958.142635. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-PRT.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-QAT / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: QAT, 2024, exact matched observations in country-panel.csv.

Result: 4003485454.598779. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-QAT.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-KOR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: KOR, 2024, exact matched observations in country-panel.csv.

Result: 39732796329.56. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-KOR. Sources:

WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-MDA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: MDA, 2024, exact matched observations in country-panel.csv.

Result: 1395864141.143493. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-MDA.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ROU / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ROU, 2024, exact matched observations in country-panel.csv.

Result: 14592229550.142183. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ROU.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-RUS / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: RUS, 2021, exact matched observations in country-panel.csv.

Result: 32689193358.729317. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-RUS.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-RWA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: RWA, 2022, exact matched observations in country-panel.csv.

Result: 1002356989.837338. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-RWA.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-KNA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: KNA, 2017, exact matched observations in country-panel.csv.

Result: 78439335.32722318. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-KNA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-LCA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: LCA, 2020, exact matched observations in country-panel.csv.

Result: 139320946.3522852. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-LCA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-VCT / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: VCT, 2023, exact matched observations in country-panel.csv.

Result: 118542155.84744492. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-VCT.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-WSM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: WSM, 2024, exact matched observations in country-panel.csv.

Result: 145197308.3270937. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-WSM.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-STP / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: STP, 2023, exact matched observations in country-panel.csv.

Result: 58539324.17557372. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-STP.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SAU / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SAU, 2024, exact matched observations in country-panel.csv.

Result: 30152408748.531284. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SAU.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SEN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SEN, 2024, exact matched observations in country-panel.csv.

Result: 2162657226.0690823. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SEN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SRB / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SRB, 2007, exact matched observations in country-panel.csv.

Result: 1107134216.1694326. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SRB.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SYC / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SYC, 2024, exact matched observations in country-panel.csv.

Result: 377518200.46535337. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SYC.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SLE / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SLE, 2018, exact matched observations in country-panel.csv.

Result: 437163317.8278171. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SLE.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SGP / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SGP, 2024, exact matched observations in country-panel.csv.

Result: 16756311869.639526. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SGP.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SVK / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SVK, 2024, exact matched observations in country-panel.csv.

Result: 8257356693.28558. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SVK.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SVN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SVN, 2024, exact matched observations in country-panel.csv.

Result: 4517146779.663229. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SVN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SLB / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SLB, 2018, exact matched observations in country-panel.csv.

Result: 133389434.6145737. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SLB.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ZAF / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ZAF, 2025, exact matched observations in country-panel.csv.

Result: 9173948103.854956. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ZAF.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ESP / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ESP, 2024, exact matched observations in country-panel.csv.

Result: 59725409305.01281. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ESP.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-LKA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: LKA, 2024, exact matched observations in country-panel.csv.

Result: 2881422041.147365. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-LKA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SDN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SDN, 2018, exact matched observations in country-panel.csv.

Result: 2347941820.0765934. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SDN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SUR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SUR, 2024, exact matched observations in country-panel.csv.

Result: 271460918.466405. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SUR.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SWE / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SWE, 2024, exact matched observations in country-panel.csv.

Result: 21149534801.525703. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SWE.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-CHE / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: CHE, 2024, exact matched observations in country-panel.csv.

Result: 17260038030.645496. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-CHE.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-SYR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: SYR, 2010, exact matched observations in country-panel.csv.

Result: 3694720975.4071794. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-SYR.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-TJK / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: TJK, 2023, exact matched observations in country-panel.csv.

Result: 1555862691.534611. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-TJK.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-THA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: THA, 2024, exact matched observations in country-panel.csv.

Result: 20128796041.193356. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-THA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-TLS / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: TLS, 2023, exact matched observations in country-panel.csv.

Result: 253625110.1800985. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-TLS.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-TGO / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: TGO, 2024, exact matched observations in country-panel.csv.

Result: 569161693.1168905. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-TGO.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-TON / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: TON, 2023, exact matched observations in country-panel.csv.

Result: 74771511.93691875. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-TON.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-TTO / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: TTO, 2024, exact matched observations in country-panel.csv.

Result: 1260802781.056288. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-TTO.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-TUN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: TUN, 2024, exact matched observations in country-panel.csv.

Result: 2998833454.35892. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-TUN.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-TKM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: TKM, 2000, exact matched observations in country-panel.csv.

Result: 209732293.29485548. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-TKM.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-TUV / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: TUV, 2008, exact matched observations in country-panel.csv.

Result: 5600447.915124739. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-TUV.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-TUR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: TUR, 2024, exact matched observations in country-panel.csv.

Result: 21380173402.183914. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-TUR.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-UGA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: UGA, 2024, exact matched observations in country-panel.csv.

Result: 1485028663.9236047. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-UGA.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-UKR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: UKR, 2024, exact matched observations in country-panel.csv.

Result: 7422219074.538817. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-UKR.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ARE / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ARE, 2023, exact matched observations in country-panel.csv.

Result: 23474888200.932762. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ARE.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-GBR / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: GBR, 2025, exact matched observations in country-panel.csv.

Result: 93031876694.23149. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-GBR.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-TZA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: TZA, 2024, exact matched observations in country-panel.csv.

Result: 1305228826.4831173. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-TZA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-USA / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: USA, 2024, exact matched observations in country-panel.csv.

Result: 232809983536.10242. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-USA.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-URY / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: URY, 2024, exact matched observations in country-panel.csv.

Result: 1759547969.8426583. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-URY.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-UZB / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: UZB, 2024, exact matched observations in country-panel.csv.

Result: 4385907427.999414. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-UZB.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-VUT / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: VUT, 2011, exact matched observations in country-panel.csv.

Result: 75890955.4548575. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-VUT.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-VEN / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: VEN, 2013, exact matched observations in country-panel.csv.

Result: 8979250101.346407. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-VEN.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-VNM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: VNM, 2023, exact matched observations in country-panel.csv.

Result: 28665117554.445892. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-VNM.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-YEM / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: YEM, 2019, exact matched observations in country-panel.csv.

Result: 1808757505.945069. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-YEM.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ZMB / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ZMB, 2024, exact matched observations in country-panel.csv.

Result: 882370198.5837479. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ZMB.

Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py: food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-WBFOOD-ZWE / Broad food import proxy, not eligible category demand

Formula: Same-year food merchandise-import share /100 × total merchandise imports.

Substitution: ZWE, 2024, exact matched observations in country-panel.csv.

Result: 1800536737.8009546. Units: Current USD; broad SITC food. Input IDs: I-WBFOOD-ZWE.
Sources: WB_food_import_share;WB_imports_usd. Assumptions: .

Workbook: Calculation_Audit stable ID; Countries country row. Code/data: scripts/olam-analyse.py:
food_import. Slide: Country atlas. Limit: Includes multiple foods; no volume/capture or Olam
revenue estimate. Sensitivity: FX/current-price effects and reporting changes.

C-CAPITAL / Capital returns and value exposure

Formula: Enumerate positive real discount-factor polynomial roots; ROIC=normalized NOPAT/(end
PPE+NWC); payback=cumulative cash crossing.

Substitution: [{"mode":"trade","scenario":"managed","NPV":0.35768624230170054,"IRR_roots":[0.112467775104],"IRR_interpretation":"Unique positive-discount-factor root","annual_payback_year":10,"annual_discounted_payback_year":24,"peak_annual_funding":2.9413770000000037,"NPV_per_peak_funding":0.12160503135154048,"closeout_PV":0.2889778043333594,"NPV_without_closeout":0.06870843796834114,"post2036_PV":1.4447570413376705,"post2036_PV_share_of_gross_positive_PV":0.46379043841650924,"franchise_terminal_PV":0.0,"year3_ROIC":0.09890536114462992,"year3_capital_turns":11.607475835245895,"definition":"Unlevered real USD.
