

Missing evidence ranked by decision consequence

Version 1.1.0 | Audited 8 October 2026 | Independent public-data research

E1 / Paid eligible orders, unit contribution, usable output and rival offers

Consequence: Can reverse selection and investment NPV. Owner: Country/Category with Finance. Required evidence: Customer/order reconciliation and actual independent offers. Cost: Vendor/internal access and fieldwork quote required; cost unknown. No zero substituted for missing volume, price, capex, access or liquidity. A written quote and delay estimate precede commissioning.

E2 / Monthly credit, stock, collateral, FX/commodity and tax

Consequence: Can make positive annual EBITDA unfundable. Owner: Treasury, Credit, local tax counsel. Required evidence: 12-24 months ledgers, exposure/hedge basis and legal tax schedule. Cost: Quote, lead time and opportunity-cost estimate before commissioning. No zero substituted for missing volume, price, capex, access or liquidity. A written quote and delay estimate precede commissioning.

E3 / Physical assets, legal access, permits and rights

Consequence: Can exclude action regardless of positive NPV. Owner: Engineering, Legal, Sustainability. Required evidence: Yield/uptime/route bottleneck, HS/product licences, supplier rights. Cost: Engineering/legal review quote required. No zero substituted for missing volume, price, capex, access or liquidity. A written quote and delay estimate precede commissioning.

E4 / Causal commercial effect, spillover and durable repeat

Consequence: Can invalidate marketing and transferable learning. Owner: Measurement lead and Country Marketing. Required evidence: Baseline variance/ICC, control eligibility, cluster costs, attrition. Cost: Power-based sample; no fixed real budget or sample fabricated. No zero substituted for missing volume, price, capex, access or liquidity. A written quote and delay estimate precede commissioning.

E5 / Basin/asset hazards, adaptation, common ports and suppliers

Consequence: Can reverse resilience/portfolio credit. Owner: Supply Chain and Sustainability. Required evidence: Geocoded hazards, crop calendars, adaptation quote and common-exposure

ledger. Cost: Hazard/engineering diligence quote required. No zero substituted for missing volume, price, capex, access or liquidity. A written quote and delay estimate precede commissioning.

E6 / Product demand/trade panel and current tariff concordance

Consequence: Can change access, forecast and category boundaries. Owner: Strategy data steward / Legal. Required evidence: Household consumption, bilateral HS quantity/price and rules. Cost: Public access plus licensed costs, if any, recorded before purchase. No zero substituted for missing volume, price, capex, access or liquidity. A written quote and delay estimate precede commissioning.

Scope limitations

The 195-country coverage is complete as a disposition/threshold scaffold, not 195 verified investment valuations. Eighteen priority product plans are hypotheses. Population remains WPP Medium only: the compact workbook does not contain low/high variants.

Internal/legal/asset/household evidence cannot be manufactured from GDP, national supply or health narratives. No estimated product demand system, gravity, GARCH, crop damage or marketing effect is claimed. The originality search is documented and bounded; actual management-policy comparison, portfolio optimization and external expert review remain open.
