

Eighteen product-specific commercial cases in ten priority markets

Version 1.1.0 | Audited 8 October 2026 | Independent public-data research

Brazil / Soybeans

Decision unit BRA-soybeans. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 soybeans other than seed; verify GMO/traceability eligibility; candidate code 120190 is a concordance starting point, not customs clearance.

Customer and need: Crushers, feed processors and import buyers. Protein/oil yield, traceability and shipment continuity. Offer: Qualified supplier lot with crush and quality evidence. Price/pack: Delivered price per usable output; reconcile by-product value. Channel: Approved suppliers, cooperatives and independent offtakers. Promotion/service: Traceability and usable-output proof; no assumed green premium.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country BRA category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_BRA, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_government_debt, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-trade-[world], C-POP-BRA, C-SENSITIVITY.

Brazil / Maize

Decision unit BRA-maize. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 maize other than seed; destination/feed eligibility required; candidate code 100590 is a concordance starting point, not customs clearance.

Customer and need: Feed mills and industrial grain buyers. Quality, usable dry matter and dependable delivery. Offer: Specification-based origination and shipment contract. Price/pack: Delivered USD per usable dry-matter tonne; adjust quality losses. Channel: Qualified cooperatives, elevators and bankable B2B buyers. Promotion/service: Technical specification and independent inspection, not consumer advertising.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country BRA category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_BRA, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_government_debt, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-trade-[world], C-POP-BRA, C-SENSITIVITY.

Brazil / Wheat

Decision unit BRA-wheat. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 wheat other than durum/seed; durum uses 100119; candidate code 100199 is a concordance starting point, not customs clearance.

Customer and need: Commercial millers and eligible food-security offtakers. Specification, continuity and funded landed spread. Offer: Commercial offtake with origin and vessel alternatives. Price/pack: Quality-adjusted delivered price, credit, collateral and freight. Channel: Approved origins, importers and competitively contracted buyers. Promotion/service: Service agreement and performance clauses; ownership is not an order.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country BRA category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_BRA, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_government_debt, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-trade-[world], C-POP-BRA, C-SENSITIVITY.

Cameroon / Wheat flour

Decision unit CMR-wheat_flour. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 wheat/meslin flour; local tariff subline required; candidate code 110100 is a concordance starting point, not customs clearance.

Customer and need: Bakers and wholesale flour customers. Saleable loaves per delivered flour bag. Offer: Technical baking service with measured output and returns. Price/pack: Contract per bag linked to measured usable output, freight and credit. Channel: Baker clusters and distributor service routes. Promotion/service: Bake trials, operator instruction and paid repeat after support.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country CMR category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_CMR, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini,

WB_unemployment, WB_private_credit, WB_electricity_access, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-partner-[world], C-POP-CMR, C-SENSITIVITY.

Cameroon / Rice

Decision unit CMR-rice. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 semi/wholly milled rice; verify grade and treatment; candidate code 100630 is a concordance starting point, not customs clearance.

Customer and need: Households, food-service, importers and distributors. Consistent cooking yield, cash access and availability. Offer: Grade-specific contracted lot and cooked-output comparison. Price/pack: Delivered price per saleable tonne and per prepared meal. Channel: Licensed importers, wholesalers and eligible retail routes. Promotion/service: Blind grade/quality test, shipment reliability and paid reorder.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country CMR category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_CMR, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_electricity_access, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-partner-[world], C-POP-CMR, C-SENSITIVITY.

Ghana / Wheat flour

Decision unit GHA-wheat_flour. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 wheat/meslin flour; local tariff subline required; candidate code 110100 is a concordance starting point, not customs clearance.

Customer and need: Bakers and wholesale flour customers. Saleable loaves per delivered flour bag. Offer: Technical baking service with measured output and returns. Price/pack: Contract per bag linked to measured usable output, freight and credit. Channel: Baker clusters and distributor service routes. Promotion/service: Bake trials, operator instruction and paid repeat after support.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country GHA category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_GHA, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-partner-[world], C-POP-GHA, C-SENSITIVITY.

Ghana / Pasta

Decision unit GHA-pasta. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 candidate uncooked pasta excluding egg; formulation changes code; candidate code 190219 is a concordance starting point, not customs clearance.

Customer and need: Households, caterers and food distributors. Affordable meal, cooking reliability and distribution. Offer: Taste/cooking-time trial against locally used substitutes. Price/pack: Price per prepared serving plus fuel/time; chosen pack must be tested. Channel: Wholesale/retail clusters and food-service customer panels. Promotion/service: Local preparation demonstrations with a no-promotion repeat period.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country GHA category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and

opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_GHA, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-partner-[world], C-POP-GHA, C-SENSITIVITY.

India / Rice

Decision unit IND-rice. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 semi/wholly milled rice; verify grade and treatment; candidate code 100630 is a concordance starting point, not customs clearance.

Customer and need: Households, food-service, importers and distributors. Consistent cooking yield, cash access and availability. Offer: Grade-specific contracted lot and cooked-output comparison. Price/pack: Delivered price per saleable tonne and per prepared meal. Channel: Licensed importers, wholesalers and eligible retail routes. Promotion/service: Blind grade/quality test, shipment reliability and paid reorder.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country IND category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_IND, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_government_debt, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-trade-[world], C-POP-IND, C-SENSITIVITY.

Mozambique / Rice

Decision unit MOZ-rice. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 semi/wholly milled rice; verify grade and treatment; candidate code 100630 is a concordance starting point, not customs clearance.

Customer and need: Households, food-service, importers and distributors. Consistent cooking yield, cash access and availability. Offer: Grade-specific contracted lot and cooked-output comparison. Price/pack: Delivered price per saleable tonne and per prepared meal. Channel: Licensed importers, wholesalers and eligible retail routes. Promotion/service: Blind grade/quality test, shipment reliability and paid reorder.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country MOZ category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_MOZ, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_government_debt, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-partner-[world], C-POP-MOZ, C-SENSITIVITY.

Mozambique / Edible oil

Decision unit MOZ-edible_oil. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 candidate refined palm-oil line; actual composition determines code; candidate code 151190 is a concordance starting point, not customs clearance.

Customer and need: Households, food-service and oil distributors. Cost per cooking use, trusted quality and availability. Offer: Affordable verified pack and reliable replenishment. Price/pack: Net price per litre and per measured cooking use; safety/specification gate. Channel: Qualified distributors, independent retail and food-service cohorts. Promotion/service: Replenishment and verified quality; no unproven health claim.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries

at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country MOZ category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_MOZ, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_government_debt, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-partner-[world], C-POP-MOZ, C-SENSITIVITY.

Nigeria / Semolina

Decision unit NGA-semolina. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 six-digit; wheat groats/meal, verify local semolina subline; candidate code 110311 is a concordance starting point, not customs clearance.

Customer and need: Households; wholesale and retail distributors. Cost per cooked serving and paid repeat. Offer: Cash ticket and meal yield; pilot separate from oils. Price/pack: Pack weight × net shelf price; compare total cooked-meal cost. Channel: Distributors and matched retail routes; avoid stock loading. Promotion/service: Supplier-funded trial only with incremental paid repeat and contribution.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country NGA category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index,

WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_NGA, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-partner-[world], C-POP-NGA, C-SENSITIVITY.

Nigeria / Edible oil

Decision unit NGA-edible_oil. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 candidate refined palm-oil line; actual composition determines code; candidate code 151190 is a concordance starting point, not customs clearance.

Customer and need: Households, food-service and oil distributors. Cost per cooking use, trusted quality and availability. Offer: Affordable verified pack and reliable replenishment. Price/pack: Net price per litre and per measured cooking use; safety/specification gate. Channel: Qualified distributors, independent retail and food-service cohorts. Promotion/service: Replenishment and verified quality; no unproven health claim.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country NGA category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_NGA, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-partner-[world], C-POP-NGA, C-SENSITIVITY.

Saudi Arabia / Wheat

Decision unit SAU-wheat. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 wheat other than durum/seed; durum uses 100119; candidate code 100199 is a concordance starting point, not customs clearance.

Customer and need: Commercial millers and eligible food-security offtakers. Specification, continuity and funded landed spread. Offer: Commercial offtake with origin and vessel alternatives. Price/pack: Quality-adjusted delivered price, credit, collateral and freight. Channel: Approved origins, importers and competitively contracted buyers. Promotion/service: Service agreement and performance clauses; ownership is not an order.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: $\text{Net paid orders} \times \text{delivered unit contribution} - \text{service/promotion} - \text{cannibalisation} - \text{cash funding}$; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country SAU category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_unemployment, WB_private_credit, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. Senegal / Wheat flour

Decision unit SEN-wheat_flour. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 wheat/meslin flour; local tariff subline required; candidate code 110100 is a concordance starting point, not customs clearance.

Customer and need: Bakers and wholesale flour customers. Saleable loaves per delivered flour bag. Offer: Technical baking service with measured output and returns. Price/pack: Contract per bag linked to measured usable output, freight and credit. Channel: Baker clusters and distributor service routes. Promotion/service: Bake trials, operator instruction and paid repeat after support.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: $\text{Net paid orders} \times \text{delivered unit contribution} - \text{service/promotion} - \text{cannibalisation} - \text{cash funding}$; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country SEN category lead; Finance owns contribution;

Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_SEN, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-partner-[world], C-POP-SEN, C-SENSITIVITY.

Senegal / Animal feed

Decision unit SEN-feed. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 other animal feed; species/formulation-specific local code required; candidate code 230990 is a concordance starting point, not customs clearance.

Customer and need: Livestock and poultry producers. Measured animal output per total feed and health cost. Offer: Nutrition/service trial with species-specific performance. Price/pack: Delivered feed cost per kg liveweight or saleable output. Channel: Qualified farms, integrators and feed dealers. Promotion/service: Technical feed service; monitor mortality and animal welfare.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country SEN category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_SEN, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-partner-[world], C-POP-SEN, C-SENSITIVITY.

South Africa / Maize

Decision unit ZAF-maize. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 maize other than seed; destination/feed eligibility required; candidate code 100590 is a concordance starting point, not customs clearance.

Customer and need: Feed mills and industrial grain buyers. Quality, usable dry matter and dependable delivery. Offer: Specification-based origination and shipment contract. Price/pack: Delivered USD per usable dry-matter tonne; adjust quality losses. Channel: Qualified cooperatives, elevators and bankable B2B buyers. Promotion/service: Technical specification and independent inspection, not consumer advertising.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country ZAF category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_ZAF, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_government_debt, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-trade-[world], C-POP-ZAF, C-SENSITIVITY.

South Africa / Edible oil

Decision unit ZAF-edible_oil. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 candidate refined palm-oil line; actual composition determines code; candidate code 151190 is a concordance starting point, not customs clearance.

Customer and need: Households, food-service and oil distributors. Cost per cooking use, trusted quality and availability. Offer: Affordable verified pack and reliable replenishment. Price/pack: Net price per litre and per measured cooking use; safety/specification gate. Channel: Qualified distributors, independent retail and food-service cohorts. Promotion/service: Replenishment and verified quality; no unproven health claim.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country ZAF category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_ZAF, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_government_debt, WB_electricity_access, WB_irrigated_land, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-trade-[world], C-POP-ZAF, C-SENSITIVITY.

Viet Nam / Rice

Decision unit VNM-rice. Threshold-only commercial hypothesis; neither feasible entry nor investment return validated. HS 2022 semi/wholly milled rice; verify grade and treatment; candidate code 100630 is a concordance starting point, not customs clearance.

Customer and need: Households, food-service, importers and distributors. Consistent cooking yield, cash access and availability. Offer: Grade-specific contracted lot and cooked-output comparison. Price/pack: Delivered price per saleable tonne and per prepared meal. Channel: Licensed importers, wholesalers and eligible retail routes. Promotion/service: Blind grade/quality test, shipment reliability and paid reorder.

Competitive response: Measure delivered rival price, specification, credit and service; allow matched-price/credit response. No shares or rival costs available. Economics: Net paid orders × delivered unit contribution – service/promotion – cannibalisation – cash funding; cap deliveries at verified supply. Test: Incremental paid contribution net of service/cannibalisation; measured usable output and repeat after promotion. Counterfactual: Continue existing service/eligible trade without the incremental intervention, in the same scenario.

Sustainability/access: Verify actual supplier/basin/asset, rights and product standards before any claim or route commitment. Owner: Country VNM category lead; Finance owns contribution; Treasury cash; Legal eligibility. Timing: Days 1–30 diagnose/design; 31–60 controlled test; 61–90 cash/transfer review. Stop: Stop for negative approved contribution bound, unfunded monthly liquidity, failed rights/access/quality or no paid repeat; numeric limits require Finance approval. Data: Customer-linked prices, paid orders, usable yield, returns, full route costs, credit, monthly

inventory, assets/permits and competitor observations. Cost: Obtain vendor/fieldwork quote and opportunity-cost estimate before commissioning; not zero. Sources: UN_M49, UN_WPP, UN_MEMBERS, WB_population, WB_income_ppp, WB_urban, WB_inflation, WB_food_index, WB_food_import_share, WB_food_export_share, WB_imports_usd, WB_exports_usd, WB_cereal_yield, WB_water_stress, CO_FACT, CO_VNM, WB_fertility, WB_life_expectancy, WB_age_under15, WB_age_over65, WB_dependency_ratio, WB_net_migration, WB_real_gdp, WB_gdp_growth, WB_real_income, WB_agriculture_gdp, WB_poverty, WB_gini, WB_unemployment, WB_private_credit, WB_lending_rate, WB_real_interest, WB_electricity_access, WB_cereal_area, WB_undernourishment, WB_agriculture_employment, WB_water_withdrawal. C-DCF-trade-[world], C-POP-VNM, C-SENSITIVITY.
