

Requirement-by-requirement audit of the controlling master prompt

Version 1.1.0 | Audited 8 October 2026 | Independent public-data research

Audit boundary

All 66 sections and 775 instruction blocks are preserved with original line numbers and stable requirement IDs. Prompt SHA256:

cad7533f33b14f268c7e9c311feb315f45ca77e895a78a8b33dc54daef500d80. The CSV/JSON holds verbatim requirements, status, evidence, finding, remaining action and owner. A conservative section-level open state is inherited by each instruction block; a template or specification is never automatically treated as fulfilled empirical evidence. No claim that every requirement passes.

Material repairs

Source metadata and 10 evidence classes; input IDs/units/cell/code paths; 34 public driver series; 18 separate product/customer commercial cases; 8526 scenario/milestone rows; 630 one-variable and 75 two-variable financial boundaries; capital returns/value exposure; monthly physical/cash teaching example; regression diagnostics; PSD/dependence/tail checks; network LP, imperfect EVSI, policy comparisons and ablations; 22 CEO answers; 12 hypothesis falsifiers; 10 red-team perspectives; monitoring/retirement and ranked evidence-cost queue.

Remaining hard gates

Internal/customer/asset evidence, contracting-entity and legal clearance, actual tax/FX/hedging/collateral/seasonal cash, household demand/HS capture, crop/basin adaptation, low/high demographic variants, field causal effects, commissioned expert review and empirical/exclusive policy novelty remain open. Owners and consequences are linked; missing data are not fabricated.

Section 1: The mandate and the decision that matters

Verified scope / implementation with current evidence. References: executive-decision-memo.md; deck.json.

Section 2: Operating roles and standards

Conditional / data required. Public-data implementation is provisional; independent review/internal evidence still required. References: validation-and-red-team.md; model-selection-and-foundations.md.

Section 3: Inspect the actual starting point

Verified scope / implementation with current evidence. References: change-audit.csv; baseline.json.

Section 4: Starting-model facts to preserve as assumptions, not company disclosures

Verified scope / implementation with current evidence. References: C-LEGACY; C-E10; src/lib/olamNigeriaDecisionModel.ts.

Section 5: Establish the legal entity and strategic perimeter first

Conditional / data required. Subsidiary legal entities, rights and affiliate agreements must be supplied. References: entity-perimeter.csv; entry-modes-and-perimeter.md.

Section 6: Define time, geography, and unit of analysis

Verified scope / implementation with current evidence. References: country-register.csv; country-scenario-matrix.csv.

Section 7: Evidence classes and intellectual honesty

Verified scope / implementation with current evidence. References: claim-register.csv; assumption-register.csv.

Section 8: A source register that can survive presentation questions

Conditional / data required. Some undated sources/PDF indexes/timestamps remain explicitly unverified; no invented metadata. References: source-book.csv; input-register.csv.

Section 9: Authoritative source map and retrieval priorities

Conditional / data required. Country/product/asset/customer coverage is uneven; preferred primary sources not all retrievable. References: source-book.csv; retrieval manifests; country-driver-coverage.csv.

Section 10: Data model, concordance, and global coverage

Conditional / data required. No household/asset identifiers, actual HS concordance, or WPP low/high variants retrieved. References: country-driver-coverage.csv; membership-verification.csv; population-variants.csv.

Section 11: Country drivers: demographics and purchasing power

Conditional / data required. Age/health/migration proxies retrieved; household/product future purchase paths absent. References: country-driver-coverage.csv; country atlas.

Section 12: Country drivers: economics, institutions, and finance

Conditional / data required. Public drivers retrieved; actual company financing/currency/tax and institutions absent. References: country-driver-coverage.csv; evidence-request-queue.csv.

Section 13: Country drivers: food preferences, health, and customer needs

Conditional / data required. No observed category preferences, household consumption or nutrition premium. References: priority-commercial-plans.md; model-selection-register.csv.

Section 14: Country drivers: climate, nature, disasters, and adaptation

Conditional / data required. No geocoded crop/basin/asset hazards or adaptation costs. References: climate slide; model-selection-register.csv; E5.

Section 15: Country drivers: geopolitics and international trade

Conditional / data required. Current product-specific rights, tariffs, sanctions and counterparty clearance need Legal. References: trade slide; E3/E6; source-book.csv.

Section 16: Product, competitor, and operating analysis

Conditional / data required. Global competitors inspected; local shares/costs and complete product mass balances unavailable. References: priority-product-plans.csv; competitive-baseline; entry-mode-register.csv.

Section 17: Convert global coverage into an actionable prioritisation system

Conditional / data required. Priority/dispositions are evidence priorities; actual country profitability ranking unavailable. References: country-register.csv; priorities; C-SENSITIVITY.

Section 18: Scenario architecture: macro worlds and business mechanisms

Verified scope / implementation with current evidence. References: analysis.json:scenarios; Scenario_Inputs.

Section 19: The central case and probability discipline

Verified scope / implementation with current evidence. References: central; worlds; assumption-register.csv.

Section 20: Econometric design: questions before equations

Conditional / data required. One supply benchmark executed/rejected; demand/trade/causal modules unestimated for documented data reasons. References: model-selection-register.csv; regression-diagnostics.pdf.

Section 21: Demand systems, elasticity, and health-related substitution

Conditional / data required. Demand system conditional on household/category panel; not fitted. References: MODEL-1; E6.

Section 22: Trade modelling and the difference between opportunity and capture

Conditional / data required. Gravity/attainable capture data insufficient; broad imports not substituted. References: MODEL-2; C-TRADE-NGA.

Section 23: Time-series models, volatility, and structural breaks

Conditional / data required. No matched procurement/commodity/FX exposure and hedge series. References: MODEL-4; E2.

Section 24: Climate and agriculture models

Conditional / data required. No location-specific crop/climate damage estimates. References: MODEL-5; E5.

Section 25: Marketing and commercial causality

Conditional / data required. Pilot designed; no actual treatment/control observations or effect. References: pilot-charter.md; MODEL-6; C-E18.

Section 26: Long-run growth, institutions, and adaptation of established economics

Conditional / data required. Foundation applications/exclusions documented; not every original work/prize attribution independently retrieved. References: model-selection-and-foundations.md.

Section 27: Mathematical foundations and why they belong

Conditional / data required. Executed appropriate methods; no estimated/calibrated global stochastic policy. References: model-selection-and-foundations.md; C-EVSI/C-NETWORK/C-DEPENDENCE.

Section 28: Estimation diagnostics and model validation

Conditional / data required. Latest-vintage retrospective diagnostics; real-time backtest and parameter uncertainty missing. References: regression-diagnostics.pdf; regression-year-errors.csv; model-selection-register.csv.

Section 29: Extrapolation from the official horizon to the 25-year horizon

Conditional / data required. Outer growth chosen, not an institutional forecast; uncertainty/structural alternatives uncalibrated. References: A_OUTER; capital-metrics.csv; source-book.csv; OECD/UN_WPP.

Section 30: Scenario implementation and dependence

Conditional / data required. Dependence constructed and PSD checked; macro driver mapping remains qualitative, not calibrated. References: C-DEPENDENCE; dependence-tail-comparison.csv; C-SCENARIOS.

Section 31: Finance: build the economics from operational quantities

Conditional / data required. Full normalized cash computed; actual country operational costs/mass-balance components unavailable. References: C-DCF; Country_Financials!A4:AA28; E1/E3.

Section 32: Working capital, tax, and cash conversion

Conditional / data required. Actual monthly seasonality, taxes, duties, depreciation and financing unavailable. References: C-MONTHLY; monthly-cash-example.csv; E2.

Section 33: Discounting, currency, and capital returns

Conditional / data required. Normalized capital metrics computed; actual local currency/WACC/hedge schedule unavailable. References: C-CAPITAL; capital-metrics.csv; Financing_FX; E2.

Section 34: Unit economics, break-even, and financial evidence

Conditional / data required. Structural sensitivities computed; actual comparable volume/margin/capex ranges unavailable. References: C-SENSITIVITY; sensitivity-one-variable.csv; sensitivity-two-variable.csv.

Section 35: Customer value and Olam value must connect

Conditional / data required. Customer usable-output economics specified; observed willingness to pay/adoption missing. References: priority-commercial-plans.md; C-E05/C-E06.

Section 36: Marketing strategy by country and route

Conditional / data required. 18 separate plans complete as hypotheses; local economics and actual budget/sample absent. References: priority-product-plans.csv; priority-commercial-plans.md.

Section 37: Sustainability as both constraint and economic mechanism

Conditional / data required. No actual emissions/water baselines, supplier-rights verification or premium/avoided-loss estimate. References: climate; priority-product-plans.csv; E3/E5.

Section 38: Portfolio and network optimisation

Conditional / data required. LP/regret teaching cases executed; global real portfolio/network allocation unsupported. References: C-NETWORK/C-REGRET; network-flow-example.csv; policy-benchmarks.csv.

Section 39: Adaptive investment, real options, and decision triggers

Conditional / data required. Staged/EVSI teaching boundaries; actual option costs/likelihoods and contracts missing. References: C-EVSI; information-value-sensitivity.csv; Decision_Triggers.

Section 40: The proposed integrated decision model

Conditional / data required. Integrated decision scaffold; no independently validated all-country optimal policy. References: adaptive; C-REGRET/C-EVSI/C-NETWORK; model cards.

Section 41: Demand, supply, and financial layers of the proposed model

Conditional / data required. Physical/financial identities implemented; fitted country demand/supply layers unavailable. References: C-E02; C-DCF; model-selection-register.csv.

Section 42: Two potentially distinctive insights to investigate

Conditional / data required. Mechanism counterexamples executed; distinctive empirical insights unvalidated on Olam cases. References: C-EVSI; C-CAPACITY-MARKETING; hypothesis-register.csv.

Section 43: Value of information and the cost of learning

Conditional / data required. Chosen EVSI/accuracy sensitivity executed; actual research quote/delay and uncertainty needed. References: C-EVSI; Information_Value; evidence-request-queue.csv.

Section 44: Proving that the proposed model is useful

Conditional / data required. Common-payoff benchmarks/ablations executed; actual management/country-score policy data missing. References: policy-benchmarks.csv; model-ablations.csv; prior-art-and-originality.md.

Section 45: Originality review and the limits of a novelty claim

Conditional / data required. Bounded primary-source search documented; exhaustive novelty/patent/commercial review unavailable. References: prior-art-search-log.csv; prior-art-and-originality.md.

Section 46: My contribution: credible, specific, and measurable

Verified scope / implementation with current evidence. References: contribution; pilot-charter.md; BASELINE.

Section 47: A concrete 90-day proof plan

Conditional / data required. 90-day plan specified; actual approved budget, access and baseline-derived power not supplied. References: pilot-charter.md; priority-commercial-plans.md.

Section 48: Global country dossiers and mandatory dispositions

Conditional / data required. All195 dossiers complete as threshold scaffold; asset/legal/cost/competitor evidence open. References: country-register.csv; country atlas; priority-product-plans.csv.

Section 49: The all-country, all-scenario calculation matrix

Verified scope / implementation with current evidence. References: country-scenario-matrix.csv; analysis.json:summary.

Section 50: Executive narrative and slide architecture

Verified scope / implementation with current evidence. References: deck.json:slides1-37; thank-you before appendix.

Section 51: Appendix structure and calculation education

Verified scope / implementation with current evidence. References: appendix-navigation; calculation-appendix.md; country atlas.

Section 52: Plain-language calculation examples required in the appendix

Verified scope / implementation with current evidence. References: C-E01 through C-E22; calculation-appendix.md.

Section 53: Calculation IDs, source lineage, and workbook architecture

Conditional / data required. Lineage and formulas repaired; every material figure still requires substantive source/input challenge. References: input-register.csv; calculation-register.csv; olam-global-model-v1.xlsx.

Section 54: Charts that reveal decisions

Conditional / data required. Native charts and diagnostic plots supplied; crop/geographic premium/risk charts unsupported by data. References: Chart_Data; demography/resilience charts; regression-diagnostics.pdf; sensitivity grids.

Section 55: Slide design and speaker notes

Conditional / data required. All slides rendered and geometrically checked; external viewing/accessibility review not independently commissioned. References: deck.json:speaker notes; native artifact layout/integrity receipt.

Section 56: Quality controls for accounting and physical consistency

Conditional / data required. Automated numerical/lineage checks; actual physical/legal/customer assumptions remain unvalidated. References: validation-checks.json; tests/olam-africa-strategy.ts; native artifact receipt.

Section 57: Red-team review: challenge the case before the CEO does

Conditional / data required. Ten specified perspectives documented by author; independent specialist review not commissioned. References: red-team-register.csv; validation-and-red-team.md.

Section 58: Specific questions the finished deck must answer

Verified scope / implementation with current evidence. References: ceo-question-register.csv; ceo-questions.md.

Section 59: Strategic hypotheses to test without forcing the answer

Conditional / data required. 12 hypotheses with tests/results/falsifiers; field evidence unexecuted. References: hypothesis-register.csv; strategic-hypotheses.md.

Section 60: Modelled financial cases for every scenario and country

Conditional / data required. All country worlds/milestones and thresholds complete; no investment-grade country valuation. References: country-scenario-matrix.csv; C-DCF; C-SENSITIVITY; country atlas.

Section 61: Monitoring and the continuing intelligence system

Verified scope / implementation with current evidence. References: monitoring-register.csv; monitoring-specification.md.

Section 62: Required deliverables

Conditional / data required. Formats delivered; full completeness subject to documented data and substantive review gaps. References: package-manifest.json; 14 deliverables and indexed reports.

Section 63: Execution sequence and checkpoints

Conditional / data required. Execution checkpoints retained; independently commissioned review unavailable. References: reproduce.md; change-log.md; validation-checks.json.

Section 64: Handling practical limits without weakening the result

Verified scope / implementation with current evidence. References: limitations-and-missing-data.md; evidence-request-queue.csv.

Section 65: Final acceptance criteria

Conditional / data required. Acceptance criteria audited; open empirical/source/asset requirements prohibit blanket pass. References: requirements-audit.csv; validation-checks.json.

Section 66: The final instruction

Conditional / data required. Continue independent authorized work completed; internal evidence gates remain open, no guaranteed 25-year forecast. References: executive-decision-memo.md; all registers; open evidence gates.
