

Six worlds: macro-to-customer, supply and financial bridges

Version 1.1.0 | Audited 8 October 2026 | Independent public-data research

managed

population income: WPP Medium; moderate real-order growth

trade climate adaptation: Gradual productivity/adaptation; functioning trade

competition preferences: No free nutrition premium; ordinary competitive response

FX inflation: Real2026USD template: no nominal inflation or local FX path applied. Actual local procurement/hedge/translation requires a separate matched model.

outer horizon: Full chosen order growth through2035, half thereafter; volume remains capacity-capped. External WPP population is not multiplied again into orders.

no double counting: Volume/growth are aggregate paid-order assumptions, including affordability/mix. Cost multiplier aggregates delivered input/freight/compliance stress; no extra FX/commodity penalty. Capacity is a distinct physical cap; days affect cash once; hurdle is chosen, not a sovereign rate addition.

unresolved: No calibrated country/category macro-to-order or climate-damage coefficients; alternative qualitative worlds do not have probabilities.

numeric financial driver vector: {'volume': 1.0, 'growth': 0.015, 'cost': 1.0, 'price': 1.0, 'fixed': 1.0, 'days': 0, 'rate': 0.1, 'capacity': 1.0}

integration

population income: WPP Medium; stronger affordable paid demand

trade climate adaptation: Lower delivered unit cost; infrastructure/productivity gain

competition preferences: Rivals may compete away gain; verify capture

FX inflation: Real2026USD template: no nominal inflation or local FX path applied. Actual local procurement/hedge/translation requires a separate matched model.

outer horizon: Full chosen order growth through2035, half thereafter; volume remains capacity-capped. External WPP population is not multiplied again into orders.

no double counting: Volume/growth are aggregate paid-order assumptions, including affordability/mix. Cost multiplier aggregates delivered input/freight/compliance stress; no extra FX/commodity penalty. Capacity is a distinct physical cap; days affect cash once; hurdle is chosen, not a sovereign rate addition.

unresolved: No calibrated country/category macro-to-order or climate-damage coefficients;
alternative qualitative worlds do not have probabilities.

numeric financial driver vector: {'volume': 1.12, 'growth': 0.025, 'cost': 0.985, 'price': 1.0, 'fixed': 0.98, 'days': -5, 'rate': 0.09, 'capacity': 1.0}

fragmented

population income: WPP Medium; weaker accessible demand

trade climate adaptation: Higher trade/compliance/stocks; reduced route capacity

competition preferences: Partial pass-through; local processing has raw-input risk

FX inflation: Real2026USD template: no nominal inflation or local FX path applied. Actual local procurement/hedge/translation requires a separate matched model.

outer horizon: Full chosen order growth through2035, half thereafter; volume remains capacity-capped. External WPP population is not multiplied again into orders.

no double counting: Volume/growth are aggregate paid-order assumptions, including affordability/mix. Cost multiplier aggregates delivered input/freight/compliance stress; no extra FX/commodity penalty. Capacity is a distinct physical cap; days affect cash once; hurdle is chosen, not a sovereign rate addition.

unresolved: No calibrated country/category macro-to-order or climate-damage coefficients;
alternative qualitative worlds do not have probabilities.

numeric financial driver vector: {'volume': 0.9, 'growth': 0.005, 'cost': 1.07, 'price': 1.04, 'fixed': 1.1, 'days': 15, 'rate': 0.12, 'capacity': 0.95}

physical

population income: WPP Medium; disrupted paid demand

trade climate adaptation: Common crop/port disruption, capacity reduction, higher input cost

competition preferences: Adaptation not a free recovery; shortages do not guarantee capture

FX inflation: Real2026USD template: no nominal inflation or local FX path applied. Actual local procurement/hedge/translation requires a separate matched model.

outer horizon: Full chosen order growth through2035, half thereafter; volume remains capacity-capped. External WPP population is not multiplied again into orders.

no double counting: Volume/growth are aggregate paid-order assumptions, including affordability/mix. Cost multiplier aggregates delivered input/freight/compliance stress; no extra FX/commodity penalty. Capacity is a distinct physical cap; days affect cash once; hurdle is chosen, not a sovereign rate addition.

unresolved: No calibrated country/category macro-to-order or climate-damage coefficients;
alternative qualitative worlds do not have probabilities.

numeric financial driver vector: {'volume': 0.82, 'growth': 0.005, 'cost': 1.15, 'price': 1.06, 'fixed': 1.15, 'days': 25, 'rate': 0.12, 'capacity': 0.8}

squeeze

population income: WPP Medium; weak real affordability

trade climate adaptation: Credit/collections and funding deteriorate

competition preferences: Net price cannot fully recover cost; packs/service require proof

FX inflation: Real2026USD template: no nominal inflation or local FX path applied. Actual local procurement/hedge/translation requires a separate matched model.

outer horizon: Full chosen order growth through 2035, half thereafter; volume remains capacity-capped. External WPP population is not multiplied again into orders.

no double counting: Volume/growth are aggregate paid-order assumptions, including affordability/mix. Cost multiplier aggregates delivered input/freight/compliance stress; no extra FX/commodity penalty. Capacity is a distinct physical cap; days affect cash once; hurdle is chosen, not a sovereign rate addition.

unresolved: No calibrated country/category macro-to-order or climate-damage coefficients; alternative qualitative worlds do not have probabilities.

numeric financial driver vector: {'volume': 0.82, 'growth': 0.0, 'cost': 1.04, 'price': 0.99, 'fixed': 1.05, 'days': 20, 'rate': 0.14, 'capacity': 1.0}

nutrition

population income: WPP Medium; changing category mix

trade climate adaptation: Standards/resource adaptation adds cost

competition preferences: Equal price/cost multiplier means no assumed net premium

FX inflation: Real2026USD template: no nominal inflation or local FX path applied. Actual local procurement/hedge/translation requires a separate matched model.

outer horizon: Full chosen order growth through 2035, half thereafter; volume remains capacity-capped. External WPP population is not multiplied again into orders.

no double counting: Volume/growth are aggregate paid-order assumptions, including affordability/mix. Cost multiplier aggregates delivered input/freight/compliance stress; no extra FX/commodity penalty. Capacity is a distinct physical cap; days affect cash once; hurdle is chosen, not a sovereign rate addition.

unresolved: No calibrated country/category macro-to-order or climate-damage coefficients; alternative qualitative worlds do not have probabilities.

numeric financial driver vector: {'volume': 1.03, 'growth': 0.01, 'cost': 1.02, 'price': 1.02, 'fixed': 1.06, 'days': 5, 'rate': 0.1, 'capacity': 1.0}
