

Validation findings and ten-perspective substantive challenge

Version 1.1.0 | Audited 8 October 2026 | Independent public-data research

Scope of this review

This is an author-led review using all ten specified perspectives, not an assertion that ten external specialists reviewed the deck. Numerical checks and business-evidence validation are distinct. Executed checks are recorded in validation-checks.json; presentation integrity/layout receipt accompanies the final native artifacts. Software passing cannot validate company margins, causality, legal access or calibrated probabilities.

CEO

Why these markets, and which capability compounds? Evidence: Current capabilities give lower-cost learning hypotheses, not proven returns. Correction/decision: Conditional priorities only; use product-specific plans and paid contribution gates. References: 18 product plans; CEO-01. Unresolved: Country profitability ranking and transferability not observed.

CFO

ROIC, terminal value and financing may conceal a negative project. Evidence: Managed owned NPV remains negative; no franchise terminal value; closeout/post2036 contributions reported. Correction/decision: Added capital metrics, sensitivities and monthly timing example. References: C-CAPITAL; C-SENSITIVITY; C-MONTHLY. Unresolved: Actual tax, capex, monthly cash and WACC absent.

Treasury

Are FX/commodity and liquidity charged twice? Evidence: Legacy imported-sales proxy remains a historical screen; actual procurement/hedge/collateral mapping is open. Correction/decision: Separate normalized real USD cash from currency-specific exposure; remove calibrated probability language. References: A_RATE; A_NWC; C-E11; C-DEPENDENCE. Unresolved: Actual FX, hedge basis, collateral and counterparty exposures absent.

Country leader

Combined products hide different needs and local channels. Evidence: Semolina/oils and other categories require separate customers and contributions. Correction/decision: Split18 product plans; matrix8526 rows with unselected nonpriority categories explicit. References: priority-product-plans.csv. Unresolved: Local interviews, access and competitor prices still needed.

Category leader

Are nutrition, yield and premium claims measured? Evidence: No observed premium or intervention effect; health narratives do not prove purchases. Correction/decision: Specify usable-output/cost-per-use and paid-repeat tests by category. References: model-selection; C-E05/C-E06. Unresolved: Actual formulation/yield/biology and adoption unavailable.

Procurement and operations

Can orders actually be delivered in peak season? Evidence: Physical cap and monthly inventory balance checked; national supply is not project supply. Correction/decision: Added capacity-marketing complementarity and feasible route LP. References: C-CAPACITY-MARKETING; C-NETWORK. Unresolved: Actual yield, uptime, supply contracts and plant/route peaks missing.

Climate and sustainability

Do country averages price real water and crop damages? Evidence: No; geocoded hazards/adaptation/rights missing. Correction/decision: No fitted damages or climate-origin approval; maintain hard gates and common-exposure inventory. References: climate; C-DEPENDENCE. Unresolved: Asset/basin adaptation feasibility not established.

Econometrician

Does the regression identify demand or 2051 investment returns? Evidence: No; retrospective latest-vintage supply benchmark has tiny gain and instability. Correction/decision: Reject investment forecasting; add VIF/residual/year/split-sample diagnostics. References: C-OLS; regression-diagnostics.pdf. Unresolved: No product elasticity, real-time backtest or causal identification.

Marketing measurement expert

Could repeat be stock loading, availability or simultaneous price changes? Evidence: Yes; no actual randomized observations. Correction/decision: Separate clusters/categories; pre-register ITT, spillover/cannibalisation, power, attrition and no-support repeat. References: pilot-charter; plans. Unresolved: Variance, ICC, experiment cost and observed lift missing.

Sceptical investor

Do waiting or partnering dominate the proposed integration? Evidence: Partner wins chosen regret example, owned central case; EVSI positive only above an accuracy/cost boundary. Correction/decision: Add common-payoff benchmarks, ablations and imperfect-study sensitivity; restrict originality claim. References: C-REGRET; C-EVSI; C-ABLATION. Unresolved: Empirical multi-country policy superiority and literature completeness open.
