

CONSULTANT - COMMUNICATIONS · SHILLONG

How I would communicate Meghalaya

My strategic communications perspective for public programmes

Manash Protim Deori · IIM Shillong · Strategic communications, marketing & analytics

MY THESIS

**Public communication
is strongest when it
behaves like a
service:**

What I see: public communication here is a service-delivery layer

I would judge communication by whether information becomes understandable, actionable and answerable - not simply whether it was published.

01

ACCESS

Can people receive the information where they are?

02

UNDERSTAND

Can they decode the policy, programme or announcement?

03

ACT

Do they know the next concrete step?

04

FEEDBACK

Can questions, grievances and signals travel back?

What changes for me

I would organise communications around citizen outcomes - then choose content and channels as tools inside that system.

What I see in the operating context: distance, rurality and administrative spread shape communication design

I would design for the whole state, not let a Shillong-centric content model stand in for Meghalaya.

79.9%

Rural share in 2011

Derived from DES Census-base figures; dated structural baseline, not a 2026 estimate.

12

Districts

DES reference year 2022.

55

C&RD blocks

DES reference year 2022.

SERVICE ACCESS

Terrain + distance

The 2024 CM speech explicitly described terrain and distance as barriers to citizens connecting with government.

MY IMPLICATION

I would decentralise the message kit

I would create a verified master message plus district/block-ready variants, local examples, contacts and escalation paths - so distribution does not depend on one central social post.

MY GUARDRAIL

I would not confuse Shillong with Meghalaya

I would treat Shillong as the operating base and media/administrative hub, while designing communication for rural, district and community realities across the state.

I would design for digital reach - without assuming digital uniformity

Digital is essential, but the rural-urban subscription gap and formal field-publicity channels argue for deliberate channel redundancy.

61.08

Internet subscriptions / 100 people

Meghalaya, March 2025. Subscription density is not unique-person penetration.

49.45

Rural subscriptions / 100

Meghalaya, March 2025.

105.53

Urban subscriptions / 100

Meghalaya, March 2025; >100 can reflect multiple subscriptions.

RULE

No single-channel optimism

I would treat digital as a powerful layer, not a substitute for the rest of the information network.

HOW I WOULD DESIGN DISTRIBUTION

I would localise meaning, not just translate words

Language matters; so do the example, messenger, context and call-to-action that make a message usable.

01

LANGUAGE

What words will be understood without losing precision?

02

EXAMPLE

What local situation makes the policy concrete?

03

CTA

What exactly should a citizen do next?

04

MESSENGER

Which official, institution or channel is credible here?

CONTEXT I WOULD RESPECT

English is the state official language; the Language Act permits Khasi and Garo as associate official languages in specified district-level contexts. A 2022 citizen-engagement RFP separately required communication in local languages.

I would design for young audiences without treating youth as one audience

A youth-heavy state can still contain very different needs, contexts and information behaviours.

70%+

Under 35 - 2021 policy estimate

The policy estimated 27.08 lakh of 36.31 lakh people under 35. I would not present this as a current census figure.

POLICY CAUTION

Youth are not one segment

The policy itself differentiates students/non-students, rural/urban and other life situations. I would segment by need state rather than use one generic “youth tone.”

HOW I WOULD USE THIS

Format agility, not slang

I would use short-form video and visual explainers where useful, but keep authority, clarity and actionability ahead of trend mimicry.

I would turn every announcement into a citizen journey

My goal would be to move from awareness to comprehension, action, support, feedback and - where relevant - resolution.

I would run a communications confidence loop before I run a content calendar

Accuracy and speed improve when the information chain is explicit before creative production begins.

QUALITY GATE

I would stop a post if...

the source is unclear,
the action is ambiguous, the audience is wrong, or the correction path is undefined.

I would make the approval chain visible enough that speed comes from structure, not from skipping verification.

I would make one development travel across formats - not duplicate the same copy everywhere

I would build format-specific assets from one verified message architecture so each channel has a job.

Illustrative example: a new public-service enrolment window

PRESS NOTE

**Official facts + quote
+ eligibility**

Same verified message architecture; different communication job.

45S REEL

**Problem -> benefit -
> action**

Same verified message architecture; different communication job.

INFOGRAPHIC

**Eligibility + deadline
+ steps**

Same verified message architecture; different communication job.

FAQ

**Top 8 questions +
escalation**

Same verified message architecture; different communication job.

PHOTO STORY

**Implementation /
beneficiary context**

Same verified message architecture; different communication job.

DISTRICT KIT

**Local contact +
language + example**

Same verified message architecture; different communication job.

MEDIA BRIEF

**Context + evidence
+ spokesperson lines**

Same verified message architecture; different communication job.

SOCIAL CARDS

**Reminder / myth /
CTA sequence**

Same verified message architecture; different communication job.

I would build a narrative radar that separates noise from decision-worthy signals

Monitoring is valuable only when it changes what I verify, clarify, escalate or create next.

01

SIGNAL

News, social, stakeholder question, search trend

02

VERIFY

What is fact? What is incomplete?

03

CONTEXT

Who is affected and what preceded this?

04

VELOCITY

Is it emerging, accelerating, persistent or declining?

05

DECIDE

Clarify, respond, create, escalate or observe

06

LEARN

Did the response reduce confusion or create a new question?

My rule: sentiment is a signal, not a decision. I would verify the underlying issue before I optimise the response.

I would measure whether communication moved from reach to resolution

I would keep reach, but add comprehension proxies, action, closure and learning so the dashboard reflects public value.

I would avoid pretending every outcome is attributable to communications alone; the dashboard should separate delivery metrics, behaviour proxies and service outcomes.

I already understand Meghalaya through a public-system lens

My Meghalaya PDS project taught me to connect data, network constraints and last-mile consequences before recommending action.

4,500+

Government records

I used them in an Excel-based cost / sensitivity model.

8

State warehouses

Modelled in the PDS network.

281

Wholesalers

Modelled in the PDS network.

4,000+

Fair-price shops

Last-mile nodes in my supply-chain simulation.

WHAT I LEARNED

I look for the system beneath the announcement

When a public programme has thousands of nodes, communication quality depends on understanding the operational dependencies, information owners and failure points behind the message.

MY SHILLONG CONNECTION

I am not starting from zero

I completed my MBA at IIM Shillong and have already worked on a Government of Meghalaya public-system project. I would still listen before assuming that familiarity equals field knowledge.

I have already operated at the scale, speed and coordination this role demands

My strongest transferable advantage is not a single channel - it is the ability to align research, content, distribution, stakeholders and measurement under pressure.

330M+

Impressions

Across two integrated digital campaigns.

Rs 20M

Budget managed

Data-led allocation and optimisation.

-57%

CPM change

Rs 35.8 -> Rs 15.5 in my CV data.

593+

Influencers coordinated

73+ macro + 520+ micro through a structured workflow.

STRATEGY

I can frame the message

I have worked across research, intelligence, content and speech inputs in high-stakes communication environments.

EXECUTION

I can move work through people

I have coordinated large contributor networks and multi-stage review / production / dissemination workflows.

MEASUREMENT

I can improve the distribution

I use performance data as feedback on the system - while keeping public communication outcomes broader than media efficiency.

I would complement the team by connecting strategy, creative production and measurement

I would not try to duplicate specialist strengths; I would make the operating system around them sharper, faster and more measurable.

SOCIAL & CALENDARS

I would connect announcements, recurring explainers, proactive stories and service reminders to one editorial rhythm.

PRESS & BRIEFS

I would build fact-first templates that separate what happened, why it matters, key evidence, quote and next action.

NARRATIVE MONITORING

I would deliver a short daily decision brief: signal, verification, affected audience, risk, recommended response.

CREATIVE COORDINATION

I would write sharper creative briefs: audience, single message, evidence, format job, CTA, mandatory accuracy checks.

STAKEHOLDERS

I would make information ownership and approval explicit so the team knows who verifies what and by when.

ANALYTICS

I would connect reach to comprehension proxies, action and learning instead of stopping at impressions.

MY CONTRIBUTION

In my first 90 days, I would learn first, standardise second and optimise third

I would earn context before changing the system - then make the useful parts repeatable.

0-30

LEARN

Map stakeholders, information owners, approval paths, existing calendars, media relationships, recurring citizen questions and current measurement.

Output: operating map + baseline

31-60

STANDARDISE

Introduce reusable briefs, a content architecture, source/approval checklist, narrative radar and channel-specific templates.

Output: repeatable workflow

61-90

OPTIMISE

Use observed questions and performance data to improve format, cadence, localisation, escalation and proactive storytelling.

Output: learning playbook

What I would aim to leave behind: a communications system that gets clearer with every cycle

My standard would be simple: accurate enough to trust, clear enough to understand, local enough to matter, and measurable enough to improve.

01

ACCURATE

I would know where each claim came from.

02

CLEAR

I would make complexity legible without flattening it.

03

LOCAL

I would adapt context, language and messenger to the audience.

04

LEARNING

I would use feedback to make the next cycle better.

If I join, I would bring an analytical operating layer to communications - without losing the human judgement that makes public communication credible.

Thank you

I would welcome the chance to bring this thinking, execution discipline and Northeast context to the team in Shillong.

Thank you.

I would welcome the chance to discuss where this perspective is right, where it is incomplete, and how I could contribute to the team in Shillong.

Manash Protim Deori

manashdeori09@gmail.com · [linkedin.com/in/manash-protim-deori](https://www.linkedin.com/in/manash-protim-deori)

WHAT I WOULD BRING

Regional context
+
strategic clarity
+
execution discipline

Appendix follows

How I built the evidence base

I separate canonical facts from synthesis, and I show the exact source, page, logic and limitation for every important claim.

1

PRIMARY FIRST

Government of Meghalaya, DES, TRAI and NITI are the default truth anchors.

2

DATE EVERY NUMBER

2011 population is labelled 2011; 2021 policy estimates are not presented as 2026 facts.

3

ONE CANONICAL FACT SOURCE

I do not manufacture ten citations for an atomic statistic when one primary source is definitive.

4

10+ SOURCE SYNTHESIS

I triangulated the strategic thesis across 12 institutional sources before converting evidence into recommendations.

5

FACT ≠ INFERENCE

Each claim is classified as fact, derived fact, synthesis or recommendation.

6

MY CLAIMS

My quantified experience comes only from my CV data and is kept separate from external research.

How I label evidence so I do not overclaim

Every conclusion in the core deck has an evidence class, and recommendations remain recommendations.

01

FACT

Directly stated by a credible source.

Example: TRAI reports 61.08 internet subscriptions per 100 population in Meghalaya.

02

DERIVED FACT

Arithmetic from source data; method shown.

Example: 79.9% rural = rural population / total population.

03

SYNTHESIS

My conclusion from multiple sources.

Example: communication here behaves like an access-and-feedback system.

04

RECOMMENDATION

What I would do, based on evidence.

Example: use digital-plus-field distribution.

Confidence labels in the claim ledger describe the evidence quality - not certainty about future behaviour.

Why I arrived at the “service-delivery layer” thesis

The thesis is a synthesis; I tested it against multiple independent public sources before using it as the deck spine.

ACCESS

S01 · S02 · S04 · S07

rurality + terrain/distance + last-mile challenge + digital differences

PARTICIPATION

S03 · S10 · S12

feedback, participatory governance and public consultation

LOCALISATION

S02 · S05 · S06 · S09

local languages + heterogeneous youth + culturally appropriate engagement

CHANNEL SYSTEM

S07 · S08

digital reach + press/video/field publicity / direct interaction

ACTION

S02 · S04

BCC, doorstep services, helpline and grievance feedback

DISTRICT REALITY

S01 · S11

administrative spread and district-level variation

My inference: the strongest communications system connects information delivery, comprehension, action and a return path for feedback.

External claim ledger

Every block shows the exact statement I used, its source URL/page, my logic, evidence class and confidence.

C01 · FACT	Meghalaya had 2,966,889 people in the 2011 Census base used by the state DES portal: 2,371,439 rural and 595,450 urban.
SOURCE	S01 https://des.megplanning.gov.in/portal.htm
RATIONALE	I use this only as a dated structural baseline, not as a current population estimate.
	VERY HIGH

C02 · DERIVED FACT	The 2011 DES figures imply that 79.9% of Meghalaya's population was rural.
SOURCE	S01 https://des.megplanning.gov.in/portal.htm
RATIONALE	$2,371,439 / 2,966,889 = 79.93\%$. This supports designing beyond urban social-media audiences.
	VERY HIGH

External claim ledger

Every block shows the exact statement I used, its source URL/page, my logic, evidence class and confidence.

C03 · FACT

The DES portal lists 12 districts (2022) and 55 C&RD blocks (2022).

SOURCE S01 <https://des.megplanning.gov.in/portal.htm>

RATIONALE Administrative spread makes repeatable district/block communication kits more useful than a Shillong-only content model.

VERY HIGH

C04 · FACT

A 2022 Government RFP described connectivity and rural awareness as barriers to last-mile scheme uptake and called for grass-root Behaviour Change Communication.

SOURCE S02 https://meghalaya.gov.in/sites/default/files/tenders/RFP_for_Selection_of_Agency_for_Grassroot_Citizen_Engagement_Program.pdf | pp. 4 and 23 of 40

RATIONALE This is direct evidence that awareness alone is insufficient; communication must help people convert information into action.

VERY HIGH

External claim ledger

Every block shows the exact statement I used, its source URL/page, my logic, evidence class and confidence.

C05 · FACT

The same RFP specified village-level audience frameworks, communication in local languages and collection of citizen feedback/grievances.

SOURCE S02 https://meghalaya.gov.in/sites/default/files/tenders/RFP_for_Selection_of_Agency_for_Grassroot_Citizen_Engagement_Program.pdf | pp. 4 and 23 of 40

RATIONALE Localisation and feedback are explicit operating requirements in a real Meghalaya citizen-engagement mandate.

VERY HIGH

C06 · FACT

MyMeG describes its purpose as participatory governance: capturing citizen feedback, disseminating government messages through multiple channels and engaging citizens in implementation.

SOURCE S03 <https://mymeg.meghalaya.gov.in/highlights/>

RATIONALE This supports a two-way communications model rather than a one-way publishing calendar.

VERY HIGH

External claim ledger

Every block shows the exact statement I used, its source URL/page, my logic, evidence class and confidence.

C07 · FACT

In the 2024 Independence Day speech, the Chief Minister explicitly linked terrain and distance to difficulty accessing government services and described CM-CONNECT as a response.

SOURCE S04 https://www.meghalaya.gov.in/meghalaya/sites/default/files/press_release/78th_Independence_Day_2024_HCM_Speech.pdf | printed p. 9

RATIONALE The communication architecture should reduce distance through channel redundancy, field touchpoints and clear escalation paths.

VERY HIGH

C08 · FACT

The same speech said the 1971 multilingual helpline had already been used by 12,000 citizens by August 2024.

SOURCE S04 https://www.meghalaya.gov.in/meghalaya/sites/default/files/press_release/78th_Independence_Day_2024_HCM_Speech.pdf | printed p. 9

RATIONALE The helpline demonstrates that feedback/service channels are part of the communication system, not downstream of it.

VERY HIGH

External claim ledger

Every block shows the exact statement I used, its source URL/page, my logic, evidence class and confidence.

C09 · FACT

The Meghalaya State Language Act continues English as the official language and permits Khasi and Garo as associate official languages in specified district-level contexts.

SOURCE S05 https://homepolitical.meghalaya.gov.in/pdf/acts/meghalaya_language_act-2005.pdf | PDF p. 2 / Gazette p. 364

RATIONALE I would treat localisation as audience/context design, with language as one layer rather than a mechanical translation step.

VERY HIGH

C10 · FACT

The 2021 Youth Policy estimated that more than 70% of Meghalaya's population was under 35 and also warned that youth are not a homogeneous group.

SOURCE S06 https://meghalaya.gov.in/sites/default/files/documents/Meghalaya_Youth_Policy_2021_0.pdf | printed pp. 6 and 8

RATIONALE Youth relevance is high, but segmentation by life situation, rural/urban context and needs matters more than generic youth tone.

HIGH

External claim ledger

Every block shows the exact statement I used, its source URL/page, my logic, evidence class and confidence.

C11 · FACT

TRAI reported 2.08 million internet subscriptions in Meghalaya at March 2025, equal to 61.08 subscriptions per 100 population.

SOURCE S07 https://www.trai.gov.in/sites/default/files/2025-07/YIR_08072025_0.pdf | report p. 67 / PDF p. 68

RATIONALE Digital channels are material to reach, but subscription density is not the same as unique people reached.

VERY HIGH

C12 · FACT

TRAI reported 49.45 internet subscriptions per 100 rural population versus 105.53 per 100 urban population in Meghalaya at March 2025.

SOURCE S07 https://www.trai.gov.in/sites/default/files/2025-07/YIR_08072025_0.pdf | report p. 67 / PDF p. 68

RATIONALE The gap argues for digital-plus-field distribution; urban figures above 100 also warn against reading subscription density as population penetration.

VERY HIGH

External claim ledger

Every block shows the exact statement I used, its source URL/page, my logic, evidence class and confidence.

C13 · FACT

Meghalaya DIPR describes daily press releases, press conferences/briefings, photo documentation, video production and field publicity within its remit.

SOURCE S08 <https://meghalaya.gov.in/index.php/dept/25>

RATIONALE A communications consultant needs to work across earned, owned, visual and field formats rather than optimize one channel in isolation.

VERY HIGH

C14 · FACT

DIPR also describes periodic Special Interactive Programmes across districts and sub-divisions for one-to-one citizen interaction with department officials.

SOURCE S08 <https://meghalaya.gov.in/index.php/dept/25>

RATIONALE Face-to-face feedback and explanation remain part of the state's communication infrastructure.

VERY HIGH

External claim ledger

Every block shows the exact statement I used, its source URL/page, my logic, evidence class and confidence.

C15 · FACT

The MPOWER commitment plan requires stakeholder information to be timely, relevant, understandable, accessible and consultation to be culturally appropriate.

SOURCE S09 https://meghalaya.gov.in/meghalaya/sites/default/files/documents/MPOWER_Draft_ESCP_22_Jan_2024.pdf | printed p. 6

RATIONALE I use these as quality gates for communication products, not merely stylistic preferences.

VERY HIGH

C16 · SYNTHESIS

I conclude that effective public communication in Meghalaya is best designed as an access-and-feedback system, not only a content-production function.

SOURCE S01 <https://www.meghalaya.gov.in/portal.htm>
S02 https://meghalaya.gov.in/sites/default/files/documents/097_The_Selection_of_Agency_for_Consistent_Citizen_Engagement_Program.pdf | pgs. 4 and 21 of 40
S03 <https://meghalaya.gov.in/highlights>
S04 https://www.meghalaya.gov.in/meghalaya/sites/default/files/press_release/780_independence_Day_2024_MCA_Speech.pdf | printed p. 9
S05 https://meghalaya.gov.in/portal/meghalaya_languages_act-2005.pdf | PDF p. 2 / Gazette p. 364
S06 https://meghalaya.gov.in/meghalaya/sites/default/files/documents/Meghalaya_Youth_Policy_2021_02.pdf | printed p. 6 and 8
S07 https://www.mca.gov.in/india/media/1422-0114_00072023_2.pdf | report p. 67 / PDF p. 68
S08 <https://meghalaya.gov.in/index.php/meghalaya>
S09 https://meghalaya.gov.in/meghalaya/sites/default/files/documents/MPOWER_Draft_ESCP_22_Jan_2024.pdf | printed p. 6
S10 <https://meghalaya.gov.in/index.php/documents/universities>
S11 https://www.ahg.gov.in/ahg/1788_report_available_from_source_page
S12 <https://www.meghalaya.gov.in/documents/content/000000>

RATIONALE Across demographics, last-mile RFP design, MyMeG, service access, language, youth segmentation, telecom, DIPR and stakeholder standards, the common requirement is to move information into understanding, action and feedback.

HIGH

External claim ledger

Every block shows the exact statement I used, its source URL/page, my logic, evidence class and confidence.

C17 · RECOMMENDATION

I would use a digital-plus-field channel architecture instead of a digital-only plan.

SOURCE

S01 <https://des.megplanning.gov.in/portal.htm>
S02 https://meghalaya.gov.in/sites/default/files/tenders/RFP_for_Selection_of_Agency_for_Grassroot_Citizen_Engagement_Program.pdf | pp. 4 and 23 of 40
S04 https://www.meghalaya.gov.in/meghalaya/sites/default/files/press_release/78th_Independence_Day_2024_HCM_Speech.pdf | printed p. 9
S07 https://www.trai.gov.in/sites/default/files/2025-07/YIR_08072025_0.pdf | report p. 67 / PDF p. 68
S08 <https://meghalaya.gov.in/index.php/dept/25>

RATIONALE

High rural share, explicit terrain/access barriers, rural-urban internet-density difference, and formal field publicity all point to complementary channels.

HIGH

C18 · RECOMMENDATION

I would localise meaning - language, example, call-to-action and messenger - rather than translate one master asset word-for-word.

SOURCE

S02 https://meghalaya.gov.in/sites/default/files/tenders/RFP_for_Selection_of_Agency_for_Grassroot_Citizen_Engagement_Program.pdf | pp. 4 and 23 of 40
S05 https://homepolitical.meghalaya.gov.in/pdf/acts/meghalaya_language_act-2005.pdf | PDF p. 2 / Gazette p. 364
S06 https://meghalaya.gov.in/sites/default/files/documents/Meghalaya_Youth_Policy_2021_0.pdf | printed pp. 6 and 8
S09 https://meghalaya.gov.in/meghalaya/sites/default/files/documents/MPOWER_Draft_ESCP_22_Jan_2024.pdf | printed p. 6

RATIONALE

Local-language requirements coexist with heterogeneous audience needs and culturally appropriate engagement standards.

HIGH

External claim ledger

Every block shows the exact statement I used, its source URL/page, my logic, evidence class and confidence.

C19 · RECOMMENDATION		I would measure communication as reach -> comprehension proxy -> action -> closure/feedback -> learning.	
SOURCE	S02 https://meghalaya.gov.in/sites/default/files/tenders/RFP_for_Selection_of_Agency_for_Grassroot_Citizen_Engagement_Program.pdf pp. 4 and 23 of 40 S03 https://mymeg.meghalaya.gov.in/highlights/ S04 https://www.meghalaya.gov.in/meghalaya/sites/default/files/press_release/78th_Independence_Day_2024_HCM_Speech.pdf printed p. 9 S08 https://meghalaya.gov.in/index.php/dept/25 S09 https://meghalaya.gov.in/meghalaya/sites/default/files/documents/MPOWER_Draft_ESCP_22_Jan_2024.pdf printed p. 6		
RATIONALE	The public sources repeatedly connect communication to action, feedback, grievance resolution, direct interaction and accessible information.		HIGH

C20 · RECOMMENDATION		I would make narrative monitoring a decision system: verify the signal, identify the affected audience, judge velocity/risk, decide response, then log the outcome.	
SOURCE	S03 https://mymeg.meghalaya.gov.in/highlights/ S08 https://meghalaya.gov.in/index.php/dept/25 S09 https://meghalaya.gov.in/meghalaya/sites/default/files/documents/MPOWER_Draft_ESCP_22_Jan_2024.pdf printed p. 6		
RATIONALE	Public communications teams already operate across press, multi-channel dissemination and citizen feedback; monitoring is useful only when it changes a decision.		MODERATE-HIGH

My evidence ledger

I keep my personal proof separate from regional research and write it in the first person.

CV01

I completed my MBA at IIM Shillong (Jun 2023-Apr 2025).

SOURCE

<https://github.com/ManashProtimDeori/Manash-Protim-Deori/blob/main/src/data/resume.ts>
<https://manash-protim-deori.vercel.app/resume>

WHY I THINK IT MATTERS

This gives me lived academic familiarity with Shillong and a management foundation relevant to structured problem-solving.

CV02

I modelled Meghalaya's Public Distribution System using 4,500+ government records.

SOURCE

<https://github.com/ManashProtimDeori/Manash-Protim-Deori/blob/main/src/data/resume.ts>

WHY I THINK IT MATTERS

I have already worked with complex Meghalaya public-system data rather than approaching the state only from desk research.

My evidence ledger

I keep my personal proof separate from regional research and write it in the first person.

CV03

My PDS simulation covered 8 state warehouses, 281 wholesalers and 4,000+ fair-price shops.

SOURCE

<https://github.com/ManashProtimDeori/Manash-Protim-Deori/blob/main/src/data/resume.ts>

WHY I THINK IT MATTERS

The project trained me to think in networks, last-mile constraints and operational interdependencies.

CV04

My PDS recommendations were framed around food-security resilience for 2M+ beneficiaries.

SOURCE

<https://github.com/ManashProtimDeori/Manash-Protim-Deori/blob/main/src/data/resume.ts>

WHY I THINK IT MATTERS

I understand that public systems ultimately have citizen-level consequences; analysis and communication both have to respect that.

My evidence ledger

I keep my personal proof separate from regional research and write it in the first person.

CV05

I managed two integrated digital campaigns that generated 330M+ impressions and grew communities to 260K+ and 192K+ followers.

SOURCE

<https://github.com/ManashProtimDeori/Manash-Protim-Deori/blob/main/src/data/resume.ts>

WHY I THINK IT MATTERS

I have operated high-volume digital communication and can distinguish reach from the deeper outcomes this role needs.

CV06

I managed a Rs 20M marketing budget and reduced CPM from Rs 35.8 to Rs 15.5 - about a 57% reduction.

SOURCE

<https://github.com/ManashProtimDeori/Manash-Protim-Deori/blob/main/src/data/resume.ts>

WHY I THINK IT MATTERS

I bring measurement discipline and can use performance data to improve distribution efficiency without reducing communication to vanity metrics.

My evidence ledger

I keep my personal proof separate from regional research and write it in the first person.

CV07

I coordinated 73+ macro-influencers and 520+ micro-influencers through a structured create-review-produce-distribute workflow.

SOURCE

<https://github.com/ManashProtimDeori/Manash-Protim-Deori/blob/main/src/data/resume.ts>

WHY I THINK IT MATTERS

I am used to coordinating many contributors, maintaining message consistency and delivering locally relevant content under time pressure.

CV08

I developed event-specific speech inputs for 8 events involving the Prime Minister and Home Minister of India.

SOURCE

<https://github.com/ManashProtimDeori/Manash-Protim-Deori/blob/main/src/data/resume.ts>

WHY I THINK IT MATTERS

I have experience adapting messages to context, audience and speaker while working inside high-stakes approval environments.

Why I would use digital + field distribution

This is the reasoning chain behind a recommendation - not an attempt to present an opinion as a fact.

OBSERVED	2011 structural baseline is ~79.9% rural.
OBSERVED	2025 TRAI subscription density is lower in rural than urban Meghalaya.
OBSERVED	The state explicitly describes terrain/distance and last-mile awareness challenges.
OBSERVED	DIPR retains field publicity and direct interactive programmes.
MY INFERENCE	A digital-only plan would create avoidable coverage and comprehension risk.
MY ACTION	I would assign digital, press, district/field and feedback channels complementary jobs.

Why I would localise meaning, not only language

This is the reasoning chain behind a recommendation - not an attempt to present an opinion as a fact.

OBSERVED	The Language Act creates distinct official/associate language contexts.
OBSERVED	A citizen-engagement RFP required local-language communication.
OBSERVED	The youth policy says youth are not a homogeneous group.
OBSERVED	MPOWER requires understandable, accessible and culturally appropriate information.
MY INFERENCE	Literal translation cannot solve differences in context, need state or trust.
MY ACTION	I would localise language + example + CTA + messenger + support path.

Why I would connect communication to feedback and closure

This is the reasoning chain behind a recommendation - not an attempt to present an opinion as a fact.

OBSERVED	MyMeG is explicitly designed to capture feedback and disseminate messages.
OBSERVED	The citizen-engagement RFP asks for feedback/grievance collection.
OBSERVED	CM-CONNECT includes a feedback/grievance helpline.
OBSERVED	DIPR supports direct citizen-official interaction through SIPs.
MY INFERENCE	A message is incomplete when citizens have no clear return path.
MY ACTION	I would report reach, comprehension proxy, action, feedback/closure and learning separately.

What I would validate in the field before I scale anything

Desk research gives me a disciplined starting point. It does not give me permission to assume audience behaviour I have not observed.

01

CURRENT POPULATION

The most authoritative state population split cited here is Census 2011; I use it as structural context, not current headcount.

02

PLATFORM BEHAVIOUR

I do not claim Meghalaya-specific Facebook/Instagram/WhatsApp audience shares without defensible state-level evidence.

03

SUBSCRIPTION ≠ PEOPLE

TRAJ internet subscriptions per 100 population can include multiple subscriptions and should not be read as unique-user penetration.

04

LANGUAGE USE

The Language Act describes official use; actual communication preference should be validated by district/audience and content purpose.

05

COMPREHENSION

Views and reach do not prove understanding; I would test recurring questions, completion, response quality and task completion.

06

ATTRIBUTION

Service outcomes are influenced by programme design and operations; I would not attribute every improvement to communications alone.

The 20 review passes I ran

Each pass tested a different failure mode. I used the later passes to challenge and improve the conclusions from the earlier ones.

01	Evidence inventory	Checked every external factual statement for a claim ID and source. Removed unneeded statistics without a decision implication.	11	Intellectual rigor	Downgraded recommendations from facts and labelled synthesis/recommendation explicitly.
02	Primary-source upgrade	Prioritised Government of Meghalaya, DES, TRAI and NITI sources over commentary.	12	Counterargument review	Added caveats for subscription density, dated Census data and policy estimates.
03	Statistical validation	Recomputed the 79.9% rural share and verified dates, units and denominators.	13	Executive compression	Reduced core deck to one decision-worthy idea per slide.
04	Contradiction review	Separated 2011 Census-base population from 2021 policy estimates and 2025 telecom data.	14	Storyline	Sequenced region -> system -> execution -> evidence -> contribution.
05	Meghalaya specificity	Removed India-wide generalisations where Meghalaya evidence was available.	15	First-person audit	I rewrote every self-referential header and bullet in first person.
06	Regional nuance	Avoided treating Northeast India or Meghalaya as homogeneous audiences.	16	Audience-fit review	Strengthened citizen-engagement systems, media operations, creative workflow and fact-checking logic.
07	Shillong relevance	Kept Shillong as the professional base while avoiding the error of equating Shillong with the whole state.	17	Design review	Kept Meghalaya cues atmospheric and restrained; avoided tourism clichés and logo imitation.
08	Communications logic	Required every regional fact to generate a practical communication implication.	18	Source transparency	Added exact URLs, PDF pages, logic and confidence in the appendix.
09	Role mapping	Mapped recommendations to social, content, media, storytelling, monitoring and stakeholder needs.	19	Release red-team	Looked for overclaiming, unsupported causality, outdated-data ambiguity and fake precision.
10	My evidence	I used only my CV data for quantified personal claims.	20	Export and sequence QA	Confirmed thank-you precedes appendix, slide order is complete, and the source ledger is present.

How I would use this deck in a conversation

I would present the core in 10-12 minutes, then use this appendix to defend the evidence rather than overload the main story.

1

START WITH THE THESIS

I would ask whether the team also sees communication as part of citizen service delivery.

2

TEST MY ASSUMPTIONS

I would invite corrections on district, channel and stakeholder realities I cannot learn from desk research.

3

SHOW MY WORK

If a figure or insight is challenged, I can trace it to the exact source and page in this appendix.

4

CONNECT TO THE ROLE

I would move quickly from regional context to the operating systems I could build and run.

5

KEEP THE BOUNDARY CLEAR

This is my independent work; I do not claim knowledge of Grant Thornton or client-confidential processes.

6

END WITH CONTRIBUTION

I want the discussion to be about what I can help the team execute better - not about how much research I can display.
